

## Tecnologías de redes Cisco para Medianet

### Descripción general del producto

Una medianet es una arquitectura de punta a punta para una red que se compone de tecnologías y dispositivos avanzados e inteligentes en una plataforma optimizada para ofrecer experiencias multimedia interactivas. Una medianet presenta las siguientes características:

- **Preparación para multimedia:** puede detectar y optimizar distintos tipos de medios y aplicaciones (telepresencia, videovigilancia, colaboración en sistemas de escritorio y transmisión multimedia) para ofrecer una óptima experiencia.
- **Preparación para puntos terminales:** detecta y configura de forma automática los puntos terminales multimedia.
- **Preparación para la red:** puede detectar y responder a los cambios en la disponibilidad de dispositivos, conexiones y servicios.

Ante la adopción en aumento de nuevas aplicaciones de video y multimedia interactivas, las tecnologías de medianet revisten una importancia crucial para resolver los problemas vinculados con la transmisión de voz, datos y video por la red, y para garantizar la predictibilidad, el rendimiento, la calidad y la seguridad.

Al agilizar la implementación de aplicaciones, reducir a un mínimo la complejidad y los gastos operativos fijos, aumentar la visibilidad de la red y ayudar a ampliar la infraestructura para obtener la mejor calidad de experiencia (QoE), las tecnologías de medianet ayudan a dar respuesta a estos desafíos.

### Funciones y ventajas

Las tecnologías de redes Cisco® para Medianet amplían los límites de las redes a los puntos terminales, al crear una estrecha integración entre los servicios de red inteligentes y las aplicaciones multimedia interactivas que se distribuyen por una amplia gama de puntos terminales.

Los puntos terminales de Cisco están equipados con la interfaz de servicios multimedia (MSI), un componente de software que permite a los puntos terminales aprovechar de manera coherente los servicios de red inteligentes a fin de optimizar la calidad de la experiencia y reducir los costos operativos y de implementación. Con MSI:

- La red está preparada para multimedia y puede aplicar servicios de red cruciales de forma inteligente.
- Las aplicaciones multimedia interactivas están preparadas para la red, por lo cual pueden adaptarse de forma dinámica a las condiciones de la red y ampliar las opciones de resolución de problemas gracias a una integración más estrecha con la red.

Las tecnologías de redes Cisco para Medianet ofrecen recursos en una variedad de dispositivos de redes y puntos terminales para habilitar un sistema medianet que envía, distribuye y optimiza aplicaciones multimedia interactivas. Hoy en día, estas tecnologías de Cisco para Medianet tienen por objeto reducir los costos de TI y la complejidad de implementar video, y mejorar la experiencia de video. Las tecnologías también brindan una visibilidad superior de la red a fin de agilizar la resolución de problemas y poder evaluar el impacto de los servicios de voz, datos y video en la red.
