Closed Loop Motor Control An Introduction To Rotary:

Introduction to Industrial Automation Stamatios Manesis, George Nikolakopoulos, 2018-03-29 This book provides an extended overview and fundamental knowledge in industrial automation while building the necessary knowledge level for further specialization in advanced concepts of industrial automation It covers a number of central concepts of industrial automation such as basic automation elements hardware components for automation and process control the latch principle industrial automation synthesis logical design for automation electropneumatic automation industrial networks basic programming in PLC and PID in the industry [Introduction to Microcontroller Programming for Power Electronics Control Applications](#) Mattia Rossi, Nicola Toscani, Marco Mauri, Francesco Castelli Dezza, 2021-09-29 Microcontroller programming is not a trivial task Indeed it is necessary to set correctly the required peripherals by using programming languages like C or directly machine code Nevertheless MathWorks developed a model based workflow linked with an automatic code generation tool able to translate Simulink schemes into executable files This represents a rapid prototyping procedure and it can be applied to many microcontroller boards available on the market Among them this introductory book focuses on the C2000 LaunchPad™ family from Texas Instruments™ to provide the reader basic programming strategies implementation guidelines and hardware considerations for some power electronics based control applications Starting from simple examples such as turning on off on board LEDs Analog to Digital conversion waveform generation or how a Pulse Width Modulation peripheral should be managed the reader is guided through the settings of the specific MCU related Simulink blocks enabled for code translation Then the book proposes several control problems in terms of power management of RL and RLC loads e g involving DC DC converters and closed loop control of DC motors The control schemes are investigated as well as the working principles of power converter topologies needed to drive the systems under investigation Finally a couple of exercises are proposed to check the reader's understanding while presenting a processor in the loop PIL technique to either emulate the dynamics of complex systems or testing computational performance Thus this book is oriented to graduate students of electrical and automation and control engineering pursuing a curriculum in power electronics and drives as well as to engineers and researchers who want to deepen their knowledge and acquire new competences in the design and implementations of control schemes aimed to the aforementioned application fields Indeed it is assumed that the reader is well acquainted with fundamentals of electrical machines and power electronics as well as with continuous time modeling strategies and linear control techniques In addition familiarity with sampled data discrete time system analysis and embedded design topics is a plus However even if these competences are helpful they are not essential since this book provides some basic knowledge even to whom is approaching these topics for the first time Key concepts are developed from scratch including a brief review of control theory and modeling strategies for power electronic based systems [The Proceedings of 2024 International Conference of Electrical, Electronic and Networked Energy Systems](#) Aimin Sha, Li
