Modernisierung von Benutzeroberflächen in SCADA-Systemen am Beispiel des Variablen Trend Daniel Stojnic, 2021 Die Arbeit behandelt die Modernisierung von Benutzeroberflächen in SCADA Systemen Dabei soll erarbeitet werden wie moderne Benutzeroberflächen für SCADA Systeme aufgebaut sein müssen um möglichst viele Funktionen bei einfacher Bedienung abzudecken Des Weiteren wird untersucht wie einfache Schnittstellen zur Personalisierbarkeit durch den Anwender eingefügt werden können Die gefunden Erkenntnisse sollen am Beispiel des Variablen Trends verdeutlicht und angewandt werden Der hier angeführte Variable Trend ist Bestandteil des SCADA Systems SIMATIC WinCC Open Architecture The thesis discusses the modernization of user interfaces in SCADA systems The aim is to figure out how modern user interfaces for SCADA systems have to be structured in order to cover as many functions as possible with simple operation Furthermore it is investigated how simple interfaces can be implemented for personalization by the user The findings will be illustrated and applied using the example of the variable trend The variable trend mentioned in this thesis is part of the SIMATIC WinCC Open Architecture SCADA system

An Architectural Framework for Describing Supervisory Control and Data Acquisition (SCADA) Systems Michael P. Ward, 2004-09-01 Two recent trends have raised concerns about the security and stability of Supervisory Control and Data Acquisition SCADA systems The first is a move to define standard interfaces and communications protocols in support of cross vendor compatibility and modularity The second is a move to connect nodes in a SCADA system to open networks such as the Internet Recent failures of critical infrastructure SCADA systems highlight these concerns To ensure continued operations in times of crisis SCADA systems particularly those operating in our critical infrastructure must be secured Developing an abstract generic framework for defining and understanding SCADA systems is a necessary first step A framework can provide the tools to understand the system's functions and capabilities and how components in the system relate and interface with each other This thesis examines and describes SCADA systems their components and commonly used communications protocols It presents a matrix approach to describing and defining the features functions and capabilities of a SCADA system Two small SCADA systems using industry standard components and simulating real world applications were designed and constructed for this thesis to provide context for applying the matrix approach

Designing SCADA Application Software Stuart G McCrady, 2013-07-30 Automation systems often referred to as SCADA systems involve programming at several levels these systems include computer type field controllers that monitor and control plant equipment such as conveyor systems pumps and user workstations that allow the user to monitor and control the equipment through color graphic displays All of the components of these systems are integrated through a network such as Ethernet for fast communications This book provides a practical guide to developing the application software for all aspects of the automation system from the field controllers to the user interface workstations The focus of the book is to not only provide practical methods for designing and developing the software but also to develop a complete set of

software documentation Providing tested examples and procedures this book will be indispensable to all engineers managing automation systems Clear instructions with real world examples Guidance on how to design and develop well structured application programs Identification of software documentation requirements and organization of point names with logical naming system Guidance on best practice of standardized programming methods for SCADA systems An OPC UA Client/gateway-based Architecture for SCADA Systems with Automatic Mental Fatigue Detection Application Ahmad Abdelsattar,2023 With the emergence of Industry 4.0 concepts including digital twins traditional Supervisory Control and Data Acquisition SCADA systems impose significant restrictions on the interoperable communication between machines that use various Industrial Internet of Things IIoT devices Also recent Internet of Things IoT advancements led to the development of the analogous Operator 4.0 concept which focuses on augmenting workers with technology e.g using wearable IoT devices that can monitor workers health conditions and constructing human digital twins This thesis presents a new smart factory concept that consists of integrated and interoperable manufacturing machine and human i.e worker digital twin units First a new data exchange architecture based on Open Platform Communication protocol Unified Architecture OPC UA was developed and tested to create a digital twin of an IIoT device and monitor real time sensor data Second the architecture further incorporated a newly developed and tested mental fatigue detection technique based on wearable photoplethysmography PPG sensor readings to create a human's digital twin unit that monitors a worker's mental fatigue to mitigate potential safety risks Such an integration facilitates real time monitoring of both machines processing parameters and factory workers physiological parameters simultaneously Experimental results demonstrate the proof of concept of the new data exchange architecture in creating interoperable and non restricted machine and human digital twin units for smart factories **Open Architecture Controllers for Advanced Machine Tools** Steven Michael Schofield,1995
