Algorithms for Games Georgy M. Adelson-Velsky, Vladimir L. Arlazarov, M.V. Donskoy, 2012-12-06 Algorithms for Games aims to provide a concrete example of the programming of a two person game with complete information and to demonstrate some of the methods of solutions to show the reader that it is profitable not to fear a search but rather to undertake it in a rational fashion make a proper estimate of the dimensions of the catastrophe and use all suitable means to keep it down to a reasonable size The book is dedicated to the study of methods for limiting the extent of a search The game programming problem is very well suited to the study of the search problem and in general for multi step solution processes With this in mind the book focuses on the programming of games as the best means of

developing the ideas and methods presented While many of the examples are related to chess only an elementary knowledge of the game is needed **Search Methods for Artificial Intelligence** Leonard Bolc, Jerzy Cytowski, 1992 This book contains a description of modern search methods that are in use mainly in the field of computer science though with special stress on artificial intelligence and go so far as to discuss practical application Computers in Chess M. M. Botvinnik, 2012-02-14 Much water has flowed over the dam since this book went to press in Moscow One might expect that PIONEER would have made substantial advances unfortunately it has not There are reasons the difficulty of the problem the disenchantment of the mathematicians because of the delays and drawing out of the work and principally the insufficiency and some times complete lack of machine time The general method used by PIONEER to solve complex multidimensional search problems had already been formulated at that time It was supposed that the successful completion of the chess program PIONEER 1 would provide a sufficient validation for the method We did not succeed in completing it But unexpectedly PIONEER's method obtained a different kind of validation Since our group of mathematicians works at the Institute for Electrodynamics we were invited to solve some energy related problems and were assigned the task of constructing a program that would plan the reconditioning of the equipment in power stations initially for one month Until then the technicians had been preparing such plans without the aid of computers Although the chess program was not complete even after ten years the program PIONEER 2 for computing the monthly repair schedule for the Interconnected Power System of Russian Central was completed in a few months In mid October of 1980 a medium speed computer constructed the plan in 40 seconds When at the end of the month the mathematician A Search in Artificial Intelligence Laveen N.
