Seismic Design, Assessment and Retrofitting of Concrete Buildings Michael N. Fardis, 2009-07-25 Reflecting the historic first European seismic code this professional book focuses on seismic design assessment and retrofitting of concrete buildings with thorough reference to and application of EN Eurocode 8. Following the publication of EN Eurocode 8 in 2004 05 30 countries are now introducing this European standard for seismic design for application in parallel with existing national standards till March 2010 and exclusively after that Eurocode 8 is also expected to influence standards in countries outside Europe or at the least to be applied there for important facilities. Owing to the increasing awareness of the threat posed by existing buildings substandard and deficient buildings and the lack of national or international standards for assessment and retrofitting its impact in that field is expected to be major. Written by the lead person in the development of the EN Eurocode 8 the present handbook explains the principles and rationale of seismic design according to modern codes and provides thorough guidance for the conceptual seismic design of concrete buildings and their foundations. It examines the experimental behaviour of concrete members

under cyclic loading and modelling for design and analysis purposes it develops the essentials of linear or nonlinear seismic analysis for the purposes of design assessment and retrofitting especially using Eurocode 8 and gives detailed guidance for modelling concrete buildings at the member and at the system level Moreover readers gain access to overviews of provisions of Eurocode 8 plus an understanding for them on the basis of the simple models of the element behaviour presented in the book Also examined are the modern trends in performance and displacement based seismic assessment of existing buildings comparing the relevant provisions of Eurocode 8 with those of new US prestandards and details of the most common and popular seismic retrofitting techniques for concrete buildings and guidance for retrofitting strategies at the system level Comprehensive walk through examples of detailed design elucidate the application of Eurocode 8 to common situations in practical design Examples and case studies of seismic assessment and retrofitting of a few real buildings are also presented From the reviews This is a massive book that has no equal in the published literature as far as the reviewer knows It is dense and comprehensive and leaves nothing to chance It is certainly taxing on the reader and the potential user but without it use of Eurocode 8 will be that much more difficult In short this is a must read book for researchers and practitioners in Europe and of use to readers outside of Europe too This book will remain an indispensable backup to Eurocode 8 and its existing Designers Guide to EN 1998 1 and EN 1998 5 published in 2005 for many years to come Congratulations to the author for a very well planned scope and contents and for a flawless execution of the plan

AMR S ELNASHAI The book is an impressive source of information to understand the response of reinforced concrete buildings under seismic loads with the ultimate goal of presenting and explaining the state of the art of seismic design Underlying the contents of the book is the in depth knowledge of the author in this field and in particular his extremely important contribution to the development of the European Design Standard EN 1998 Eurocode 8 Design of structures for earthquake resistance However although Eurocode 8 is at the core of the book many comparisons are made to other design practices namely from the US and from Japan thus enriching the contents and interest of the book
