Edwards, Simon Holland, 2012-12-06 What the book is about This book is about the theory and practice of the use of multimedia multimodal interfaces for learning Yet it is not about technology as such at least in the

sense that the authors do not subscribe to the idea that one should do something just because it is technologically possible. Multimedia has been adopted in some commercial quarters to mean little more than a computer with some form of audio or more usually video attachment. This is a trend which ought to be resisted as exemplified by the material in this book. Rather than merely using a new technology because it is there, there is a need to examine how people learn and communicate and to study diverse ways in which computers can harness text, sounds, speech, images, moving pictures, gestures, touch, etc. to promote effective human learning. We need to identify which media in which combinations, using what mappings of domain to representation, are appropriate for which educational purposes. The word multimodal in the title underlies this perspective. The intention is to focus attention less on the technology and more on how to structure different kinds of information via different sensory channels in order to yield the best possible quality of communication and educational interaction. Though the reader should refer to Chapter 1 for a discussion of the use of the word multimodal, historically there was little problem.
