Computational Models of Complex Systems Vijay Kumar Mago,Vahid Dabbaghian,2013-10-31

Computational and mathematical models provide us with the opportunities to investigate the complexities of real world problems They allow us to apply our best analytical methods to define problems in a clearly mathematical manner and exhaustively test our solutions before committing expensive resources This is made possible by assuming parameter s in a bounded environment allowing for controllable experimentation not always possible in live scenarios For example simulation of computational models allows the testing of theories in a manner that is both fundamentally deductive and experimental in nature The main ingredients for such research ideas come from multiple disciplines and the importance of interdisciplinary research is well recognized by the scientific community This book provides a window to the novel endeavours of the research communities to present their works by highlighting the value of computational modelling as a research tool when investigating complex systems We hope that the readers will have stimulating experiences to pursue research in these directions

Springer Handbook of Model-Based Science Lorenzo Magnani,Tommaso Bertolotti,2017-05-22 This handbook offers the first comprehensive reference guide to the interdisciplinary field of model based reasoning It highlights the role of models as mediators between theory and experimentation and as educational devices as well as their relevance in testing hypotheses and explanatory functions The Springer Handbook merges philosophical cognitive and epistemological perspectives on models with the more practical needs related to the application of this tool across various disciplines and practices The result is a unique reliable source of information that guides readers toward an understanding of different aspects of model based science such as the theoretical and cognitive nature of models as well as their practical and logical aspects The inferential role of models in hypothetical reasoning abduction and creativity once they are constructed adopted and manipulated for different scientific and technological purposes is also discussed Written by a group of internationally renowned experts in philosophy the history of science general epistemology mathematics cognitive and computer science physics and life sciences as well as engineering architecture and economics this Handbook uses numerous diagrams schemes and other visual representations to promote a better understanding of the concepts This also makes it highly accessible to an audience of scholars and students with different scientific backgrounds All in all the Springer Handbook of Model Based Science represents the definitive application oriented reference guide to the interdisciplinary field of model based reasoning

Modeling Cities and Regions as Complex Systems

Roger White, Guy Engelen, Inge Uljee, 2024-06-11 The theory and practice of modeling cities and regions as complex self organizing systems presenting widely used cellular automata based models theoretical discussions and applications Cities and regions grow or occasionally decline and continuously transform themselves as they do so This book describes the theory and practice of modeling the spatial dynamics of urban growth and transformation As cities are complex adaptive self organizing systems the most appropriate modeling framework is one based on the theory of self organizing systems an approach already used in such fields as physics and ecology The book presents a series of models most of them developed using cellular automata CA which are inherently spatial and computationally efficient It also provides discussions of the theoretical methodological and philosophical issues that arise from the models A case study illustrates the use of these models in urban and regional planning Finally the book presents a new dynamic theory of urban spatial structure that emerges from the models and their applications The models are primarily land use models but the more advanced ones also show the dynamics of population and economic activities and are integrated with models in other domains such as economics demography and transportation The result is a rich and realistic representation of the spatial dynamics of a variety of urban phenomena The book is unique in its coverage of both the general issues associated with complex self organizing systems and the specifics of designing and implementing models of such systems
