The first edition of this book was the first text to be written on the Arena software which is a very popular simulation modeling software What makes this text the authoritative source on Arena is that it was written by the creators of Arena themselves The new third edition follows in the tradition of the successful first and second editions in its tutorial style via a sequence of carefully crafted examples and an accessible writing style The updates include thorough coverage of the new version of the Arena software Arena 7.01 enhanced support for Excel and Access and updated examples to reflect the new version of software The CD ROM that accompanies the book contains the Academic version of the Arena software The software features new capabilities such as model documentation enhanced plots file reading and writing printing and animation symbols **Simulation Modeling and Analysis of Productivity Enhancement in Manufacturing Company Using Arena Software**

Siti Hartini Embong @ Ab Wahab,2013 Every manufacturing company wants to improve and adapt their operating system in order to survive the industry competition In manufacturing organizations to improve their system it might mean to reduce the operating costs that come from the wastes in production line By using the ARENA simulation in this study the productivity improvement can be experimented without physically affect the real system and reduced the cost because designing building testing redesigning rebuilding and retesting can be an expensive project This study focus on the flow in the production line processes in one piston manufacturing company The existing plant layout was studied and formulated into ARENA simulation software as well as to enhance the productivity rate by improving certain parameters The problems identified in this production line are the effect of the bottleneck process which resulting some idle time in some workstations and the increased piston demands from the customers The data acquired and was translated into the ARENA simulation software and studied in order to simulate the existing plant layout design Hence the problems occurred in the production line can be seen clearly to determine room for productivity improvement New designs are proposed by constructing several models to acquire the best solution to improve productivity capacity and meet the forecasting demand of customer In these proposed models the parameters of the actual system are modified accordingly in the terms of material handling such as human resources machine cycle time the number of machines shape and area of plant layout From the simulation results the significant contribution factor that influenced the rate of productivity was by adding certain machines to do the same process to cover the buffer while the material handling did not have a huge effect on the production line
