Disability Interactions Catherine Holloway, Giulia Barbareschi, 2022-05-31 Disability interactions DIX is a new approach to combining cross disciplinary methods and theories from Human Computer Interaction (HCI), disability studies, assistive technology and social development to co create new technologies, experiences and ways of working with disabled people. DIX focuses on the interactions people have with their technologies and the interactions which result because of technology use. A central theme of the approach is to tackle complex issues where disability problems are part of a system that does not have a simple solution. Therefore DIX pushes researchers and practitioners to take a challenge based approach which enables both applied and basic research to happen alongside one another. DIX complements other frameworks and approaches that have been developed within HCI research and beyond. Traditional accessibility approaches are likely to focus on specific aspects of technology design and use without considering how features of large scale assistive technology systems might influence the experiences of people with disabilities. DIX aims to embrace complexity from the start to better translate the work of accessibility and assistive technology research into the real world. DIX also has a stronger focus on user centered and participatory approaches across the whole value chain of technology ensuring we design with the full system of technology in mind from conceptualization and development to large scale distribution and access. DIX also helps to acknowledge that solutions and approaches are often non binary and that technologies and interactions that deliver value to disabled people in one situation can become a hindrance in a different context. Therefore it offers a more nuanced guide to designing within the disability space which expands the more traditional problem solving approaches to designing for accessibility. This book explores why such a novel approach is needed and gives case studies of applications highlighting how different areas of focus from education to health to work to global development can benefit from applying a DIX perspective. We conclude with some lessons learned and a look ahead to the next 60 years of DIX.

UX Design for Emerging Technologies Jonathan Follett, 2015 The future of UX design is to envision humanity's relationship to technology and each other whether we're struggling with fear and loathing in reaction to genetically altered foods the moral issues of changing a child's traits to suit a parent's preferences the ethics guiding battlefield robots or the societal implications of a 150 year extended lifetime Now more than ever UX designers have the opportunity to help define the parameters of and sculpt the interactions between man and technology Designers have only just begun to think about the implications of emerging technologies for the human condition We must prepare for the transformation of our field of practice moving from design as facilitation shaping the interface and workflow to design as the arbiter driving the creation of the technology itself and applying our understanding of interaction form information and artistry to new areas To balance those asking How can this be done we must ask Why should we do this to what end and for whose benefit We must move from being passive receptors of new technology to active participants in its formation As design thinkers and practitioners we're called to serve as a bridge between technology and humanity to be explorers and actively seek out new opportunities in areas that are not yet obvious We're on the eve of some of the most significant technological changes to ever grace our world and whether these changes serve everyone or just a few will be up to us In this webcast we'll take a look at the role of the UX designer as new technologies begin to blur the boundaries between design and engineering for software hardware and biotech We'll examine core competencies and case studies in practices areas like the Internet of Things genomics and robotics Resource description page
