Diffusion Processes and their Sample Paths Kiyosi Itô, Henry P. Jr. McKean, 1974-01-01 Since its first publication in 1965 in the series Grundlehren der mathematischen Wissenschaften this book has had a profound and enduring influence on research into the stochastic processes associated with diffusion phenomena Generations of mathematicians have appreciated the clarity of the descriptions given of one or more dimensional diffusion processes and the mathematical insight provided into Brownian motion Now with its republication in the Classics in Mathematics it is hoped that a new generation will be able to enjoy the classic text of It and McKean

This book presents articles on original material from invited talks given at the IMS Workshop on Applied Probability organized by the Institute of Mathematical Sciences at the Chinese University of Hong Kong in May 1999 The goal of the workshop was to promote research in applied probability for local mathematicians and engineers and to foster exchange with experts from other parts of the world The main themes were mathematical finance and stochastic networks The topics range from the theoretical study e g ergodic theory and diffusion processes to very practical problems such as convertible bonds with market risk and insider trading The wide scope of coverage in the book make it a helpful reference for graduate students and researchers and for practitioners working in mathematical finance [Stochastic Processes for Insurance and Finance](#) Tomasz Rolski, Hanspeter Schmidli, V.

Schmidt, Jozef L. Teugels, 2009-09-25 Stochastic Processes for Insurance and Finance offers a thorough yet accessible reference for researchers and practitioners of insurance mathematics Building on recent and rapid developments in applied probability the authors describe in general terms models based on Markov processes martingales and various types of point processes Discussing frequently asked insurance questions the authors present a coherent overview of the subject and specifically address The principal concepts from insurance and finance Practical examples with real life data Numerical and algorithmic procedures essential for modern insurance practices Assuming competence in probability calculus this book will
