Contemporary Issues in Work and Organisations Russell Lansbury, Anya Johnson, Diane van den Broek, 2019-08-13 In a complex and interconnected world work and organisations are rapidly changing This book addresses key emerging issues by adopting an imaginative and innovative approach Its comprehensive coverage on work and organisations aim to provide understanding of the external forces and institutions that are changing workplaces and organisations examine how organisations are being managed from within and how this reshapes the way individuals and groups relate to each other whether they be employers employees independent professionals or contingent workers and integrate these two perspectives to show how both internal and external forces are interconnected and influence each other By combining theory and case studies the book illuminates how ideas and concepts can be applied to work and organisations in a variety of contexts Chapter 3 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license [Climate Change Policy Failures: Why Conventional Mitigation Approaches Cannot Succeed](#) Howard A Latin, 2012-05-14 At the recent UN Climate Change Conferences in Copenhagen Cancun and Durban the developed nations promised hundreds of billions of dollars in financial aid to help developing countries overcome global climate change dangers The developed nations will need to spend many more billions to limit their own greenhouse gas pollution the main cause of global warming and climate change Will all this money and effort be wasted This book argues that nearly all of the world's climate policy makers and expert advisors have been making tragic mistakes that ensure the failures of climate change mitigation attempts The great majority of climate change programs from American congressional bills to cap and trade economic incentive schemes to the Kyoto Protocol and other international treaties rely on greenhouse gas emissions reduction targets that will prove too little too late by deferring strict pollution controls too far into the future The inadequate emissions reduction measures also will not be able to bridge the gap between the highest priorities of developed and developing nations Vast discharges of greenhouse gases authorized by weak emissions reduction programs in the next several decades virtually guarantee that the cumulative concentration of greenhouse gases in the atmosphere will keep increasing while climate change continues to grow worse Rather than adopting ineffectual emissions reduction programs that cannot limit the cumulative concentration of greenhouse

gases in the air this book proposes a shift to a clean technology replacement strategy that could support current lifestyles and expanding economic development without further damaging our climate The only way to reduce the greenhouse gas levels in the atmosphere enough to decrease climate change hazards is to replace large pollution sources as rapidly as feasible in as many industrial sectors and geographic regions as possible with clean alternative technologies processes and methods

The Tragedy of the Commodity Stefano B. Longo, Rebecca Clausen, Brett Clark, 2015-06-25 Winner of the 2017 Paul Sweezy Marxist Sociology Book Award from the American Sociological Association Although humans have long depended on oceans and aquatic ecosystems for sustenance and trade only recently has human influence on these resources dramatically increased transforming and undermining oceanic environments throughout the world Marine ecosystems are in a crisis that is global in scope rapid in pace and colossal in scale In *The Tragedy of the Commodity* sociologists Stefano B Longo Rebecca Clausen and Brett Clark explore the role human influence plays in this crisis highlighting the social and economic forces that are at the heart of this looming ecological problem In a critique of the classic theory the tragedy of the commons by ecologist Garrett Hardin the authors move beyond simplistic explanations such as unrestrained self interest or population growth to argue that it is the commodification of aquatic resources that leads to the depletion of fisheries and the development of environmentally suspect means of aquaculture To illustrate this argument the book features two fascinating case studies the

thousand year history of the bluefin tuna fishery in the Mediterranean and the massive Pacific salmon fishery Longo Clausen and Clark describe how new fishing technologies transformations in ships and storage capacities and the expansion of seafood markets combined to alter radically and permanently these crucial ecosystems In doing so the authors underscore how the particular organization of social production contributes to ecological degradation and an increase in the pressures placed upon the ocean The authors highlight the historical political economic and cultural forces that shape how we interact with the larger biophysical world A path breaking analysis of overfishing The Tragedy of the Commodity yields insight into issues such as deforestation biodiversity loss pollution and climate change

The Hockey Stick and the Climate Wars Michael E. Mann, 2012-03-06 The ongoing assault on climate science in the United States has never been more aggressive more blatant or more widely publicized than in the case of the Hockey Stick graph a clear and compelling visual presentation of scientific data put together by Michael E. Mann and his colleagues demonstrating that global temperatures have risen in conjunction with the increase in industrialization and the use of fossil fuels Here was an easy to understand graph that in a glance posed a threat to major corporate energy interests and those who do their political bidding The stakes were simply too high to ignore the Hockey Stick and so began a relentless attack on a body of science and on the investigators whose work formed its scientific basis The Hockey Stick achieved prominence in a 2001 UN report on climate change and quickly became a central icon in the climate wars The real issue has never been the graph's data but rather its implied threat to those who oppose governmental regulation and other restraints to protect the environment and planet Mann lead author of the original paper in which the Hockey Stick first appeared shares the story of the science and politics behind this controversy He reveals key figures in the oil and energy industries and the media frontgroups who do their bidding in sometimes slick sometimes bare knuckled ways Mann concludes with the real story of the 2009 Climategate scandal in which climate scientists' emails were hacked This is essential reading for all who care about our planet's health and our own well being

The Madhouse Effect Michael E. Mann, Tom Toles, 2016-09-27 The award winning climate scientist Michael E. Mann and the Pulitzer Prize winning political cartoonist Tom Toles have been on the front lines of the fight against climate denialism for most of their careers They have witnessed the manipulation of the media by business and political interests and the unconscionable play to partisanship on issues that affect the well being of billions The lessons they have learned have been invaluable inspiring this brilliant colorful escape hatch from the madhouse of the climate wars The Madhouse Effect portrays the intellectual pretzels into which denialists must twist logic to explain away the clear evidence that human activity has changed Earth's climate Toles's cartoons collapse counter scientific strategies into their biased components helping readers see how to best strike at these fallacies Mann's expert skills at science communication aim to restore sanity to a debate that continues to rage against widely acknowledged scientific consensus The synergy of these two climate science crusaders enlivens the gloom and doom of so many climate themed books and may even convert die hard doubters to the side of sound science
