

Mathematics Summary

Polya se teorie

- Sy teorie leer oor probleemoplossing

Verstaan → ontwerp 'n strategie → implementeer → reflekteer

Beginnel 1: begrip van die probleem

Vra die leerders die volgende

1. Verstaan jy al die woorde?
2. Wat is die sleutelwoorde?
3. Kan jy dit probleem in u eie woorde omskryf?

Some learners may think that as learners to work on a problem, they should be able to solve it immediately. However, this is not always the case. Learners may need to be guided to understand the problem and to identify the key words. The teacher should ask learners to help, to see if they can help each other.

Understanding the problem-solving process - verbal modelling and problem-solving process. The teacher should ask learners to help, to see if they can help each other.

1. Onderlig die probleemoplossing proses.
 - Onderlig die leerders se begrip van die probleem.
 - Help hulle om die probleem te verstaan.

Verstaan → ontwerp 'n strategie → implementeer → reflekteer

- Onderlig die leerders se begrip van die probleem.
- Help hulle om die probleem te verstaan.
- Help hulle om die probleem te verstaan.

3. Teaching through problem-solving

- Learners learn maths through real contexts, problems, situations and models.
- The context and model allows learners to construct meaning about the concept.
- Opposite of teaching for problem-solving approach.

most ideal approach

The role of the teacher in problem solving

- The teacher's task is no less demanding because learners do the maths - it is actually very demanding.
- Teachers need to pick out high-quality tasks that will allow learners to learn the content by finding their own strategies and solutions.
- Teachers need to ask well-thought-out questions that will allow learners to modify and relate their strategies.
- Teachers need to listen to learners' responses and observe their work and, at the spur of the moment, determine how to expand and formalise learners' thinking.
