Undocumented Secrets of MATLAB-Java Programming Yair M. Altman, 2011-12-05 For a variety of reasons the MATLAB Java interface was never fully documented This is really quite unfortunate Java is one of the most widely used programming languages having many times the number of programmers and programming resources as MATLAB Also unfortunate is the popular claim that while MATLAB is a fine programming platform for prototyping it is not suitable for real world modern looking applications Undocumented Secrets of MATLAB Java Programming aims to correct this misconception This book shows how using Java can significantly improve MATLAB program appearance and functionality and that this can be done easily and even without any prior Java knowledge Readers are led step by step from simple to complex customizations Code snippets screenshots and numerous online references are provided to enable the utilization of this book

as both a sequential tutorial and as a random access reference suited for immediate use Java savvy readers will find it easy to tailor code samples for their particular needs for Java newcomers an introduction to Java and numerous online references are provided This book demonstrates how The MATLAB programming environment relies on Java for numerous tasks including networking data processing algorithms and graphical user interface GUI We can use MATLAB for easy access to external Java functionality either third party or user created Using Java we can extensively customize the MATLAB environment and application GUI enabling the creation of visually appealing and usable applications

Proceedings of the ... IEEE Conference on Nanotechnology ,2003 **Performance Analysis and Modeling of Digital Transmission Systems** William Turin,2012-12-06 This book is an expanded third edition of the book Performance Analysis of Digital Transmission Systems originally published in 1990 Second edition of the book titled Digital Transmission Systems Performance Analysis and Modeling was published in 1998 The book is intended for those who design communication systems and networks A computer network designer is interested in selecting communication channels error protection schemes and link control protocols To do this efficiently one needs a mathematical model that accurately predicts system behavior Two basic problems arise in mathematical modeling the problem of identifying a system and the problem of applying a model to the system analysis System identification consists of selecting a class of mathematical objects to describe fundamental properties of the system behavior We use a specific class of hidden Markov models HMMs to model communication systems This model was introduced by C E Shannon more than 50 years ago as a Noisy Discrete Channel with a finite number of states The model is described by a finite number of matrices whose elements are estimated on the basis of experimental data We develop several methods of model identification and show their relationship to other methods of data analysis such as spectral methods autoregressive moving average CARMA approximations and rational transfer function approximations
