Peer to peer P2P computing is currently attracting enormous public attention spurred by the popularity of file sharing systems such as Napster Gnutella Morpheus Kaza and several others In P2P systems a very large number of autonomous computing nodes the peers rely on each other for services P2P networks are emerging as a new distributed computing paradigm because of their potential to harness the computing power and the storage capacity of the hosts composing the network and because they realize a completely open decentralized environment where everybody can join in autonomously Although researchers working on distributed computing multiagent systems databases and networks have been using similar

concepts for a long time it is only recently that papers motivated by the current P2P paradigm have started appearing in high quality conferences and workshops In particular research on agent systems appears to be most relevant because multiagent systems have always been thought of as networks of autonomous peers since their inception Agents which can be superimposed on the P2P architecture embody the description of task environments decision support capabilities social behaviors trust and reputation and interaction protocols among peers The emphasis on decentralization autonomy ease and speed of growth that gives P2P its advantages also leads to significant potential problems Most prominent among these are coordination the ability of an agent to make decisions on its own actions in the context of activities of other agents and scalability the value of the P2P systems in how well they self organize so as to scale along several dimensions including complexity heterogeneity of peers robustness traffic redistribution etc This book brings together an introduction three invited articles and revised versions of the papers presented at the Second International Workshop on Agents and Peer to Peer Computing AP2PC 2003 held in Melbourne Australia July 2003

Handbook of Peer-to-Peer Networking Xuemin Shen, Heather Yu, John Buford, Mursalin Akon, 2010-03-03 Peer to peer networking is a disruptive technology for large scale distributed applications that has recently gained wide interest due to the successes of peer to peer P2P content sharing media streaming and telephony applications There are a large range of other applications under development or being proposed The underlying architectures share features such as decentralization sharing of end system resources autonomy virtualization and self organization These features constitute the P2P paradigm This handbook broadly addresses a large cross section of current research and state of the art reports on the nature of this

paradigm from a large number of experts in the field. Several trends in information and network technology such as increased performance and deployment of broadband networking, wireless networking and mobile devices are synergistic with and reinforcing the capabilities of the P2P paradigm. There is general expectation in the technical community that P2P networking will continue to be an important tool for networked applications and impact the evolution of the Internet. A large amount of research activity has resulted in a relatively short time and a growing community of researchers has developed. The Handbook of Peer to Peer Networking is dedicated to discussions on P2P networks and their applications. This is a comprehensive book on P2P computing.

Advances on P2P, Parallel, Grid, Cloud and Internet Computing Fatos Xhafa, Santi Caballé, Leonard Barolli, 2017-11-02. This book presents the latest innovative research findings on P2P, Parallel, Grid, Cloud and Internet Computing. It gathers the Proceedings of the 12th International Conference on P2P, Parallel, Grid, Cloud and Internet Computing held on November 8-10, 2017 in Barcelona, Spain. These computing technologies have rapidly established themselves as breakthrough paradigms for solving complex problems by enabling the aggregation and sharing of an increasing variety of distributed computational resources at large scale. Grid Computing originated as a paradigm for high performance computing offering an alternative to expensive supercomputers through different forms of large scale distributed computing while P2P Computing emerged as a new paradigm after client-server and web-based computing and has shown to be useful in the development of social networking, B2B (Business to Business), B2C (Business to Consumer), B2G (Business to Government), B2E (Business to Employee) and so on. Cloud Computing has been defined as a computing paradigm where the boundaries of computing are determined by economic rationale rather than technical limits. Cloud computing has quickly been adopted in a broad range of application domains and provides utility computing at large scale. Lastly, Internet Computing is the basis of any large scale distributed computing paradigm; it has very rapidly developed into a flourishing field with an enormous impact on today's information societies, serving as a universal platform comprising a large variety of computing forms such as Grid, P2P, Cloud and Mobile computing. The aim of the book *Advances on P2P, Parallel, Grid, Cloud and Internet Computing* is to provide the latest findings, methods and development techniques from both theoretical and practical perspectives and to reveal synergies between these large scale computing paradigms.

JXTA Daniel Brookshier, 2002. *JXTA: Java P2P Programming* provides an invaluable introduction to this new technology filled with useful information and practical examples. It was created by members of the JXTA community sharing their real world experience to introduce developers to JXTA. It starts with the fundamentals of P2P and demonstrates how JXTA fulfills the P2P promise, then covers the essentials of JXTA including the protocols, the JXTA Shell and groups. Later chapters include case studies demonstrating JXTA to synchronize data and to create distributed applications. Includes a foreword by Juan Carlos Soto, Group Marketing Manager for Project JXTA at Sun Microsystems and the jxta.org Open Source Community Manager.
