Chapter 9 Testing Hypotheses and Assessing Goodness of Fit

1. A coin is thrown independently 10 times to test the hypothesis that the probability of heads is $\frac{1}{2}$ versus the alternative that the probability is not $\frac{1}{2}$. The test rejects if either 0 or 10 heads are observed.
- What is the significance level of the test?
 - If in fact the probability of heads is .1, what is the power of the test?

Step 1 of 3

Given: $H_0: p = \frac{1}{2}$
 $H_a: p \neq \frac{1}{2}$

And p = probability of occurring head

Rejection region $W = \{\text{either 0 head or 10 head occurs}\}$

If X is the no. of heads then

$$W = \{X: \text{either } X = 0 \text{ or } X = 10\}$$

Step 2 of 3

(a) So significance level of test

$$\begin{aligned}\alpha &= P[\text{reject } H_0 | H_0 \text{ is true}] \\&= P[X = 0 | p = \frac{1}{2}] + P[X = 10 | p = \frac{1}{2}] \\&= \binom{10}{0} p^0 (1-p)^{10-0} + \binom{10}{10} p^{10} (1-p)^{10-10} \quad p = \frac{1}{2} \\&= \binom{10}{0} \left(\frac{1}{2}\right)^0 \left(1 - \frac{1}{2}\right)^{10-0} + \binom{10}{10} \left(\frac{1}{2}\right)^{10} \left(1 - \frac{1}{2}\right)^{10-10} \\&= \binom{10}{0} \left(\frac{1}{2}\right)^{10} + \binom{10}{10} \left(\frac{1}{2}\right)^{10} \\&= 2 \binom{10}{0} \\&= \frac{1}{2^5} \\&= [0.03125]\end{aligned}$$

Student Solutions Manual for Rice's Mathematical Statistics and Data Analysis, 3rd Rice,2006-02 **Answer Book for Mathematical Statistics and Data Analysis, 2nd Edition** John A. Rice,1995 **Mathematical Statistics and Data Analysis** John A. Rice,2007 This is the first text in a generation to re examine the purpose of the mathematical statistics course The book s approach interweaves traditional topics with data analysis and reflects the use of the computer with close ties to the practice of statistics The author stresses analysis of data examines real problems with real data and motivates the theory The book s descriptive statistics graphical displays and realistic applications stand in strong contrast to traditional texts that are set in abstract settings Important Notice Media content referenced within the product description or the product text may not be available in the ebook version **Introduction to Statistics and Data Analysis** Roxy Peck,Chris Olsen,Jay L. Devore,2000-11 **Optimization in Industrial Engineering** Erik Cuevas,Julio Cesar Rosas Caro,Avelina Alejo Reyes,Paulina González Ayala,Alma Rodriguez,2025-01-15 This textbook provides readers with a comprehensive exploration of optimization techniques in industrial engineering with a specific focus on the Economic Order Quantity EOQ problem It strikes a unique balance by thoroughly discussing the underlying concepts and theories equipping the reader with the knowledge needed to develop their own programs for solving complex optimization problems in the field A distinctive feature of this book is its extensive use of MATLAB implementations which serves as a practical tool to bridge the gap between theory and real world application The book is structured with the understanding that learning is accelerated when theoretical concepts are complemented by practical code based problem solving examples This approach is particularly beneficial for students who may have a weaker background in mathematics as it demonstrates the practicality and effectiveness of optimization in a more accessible manner The inclusion of ready made code examples not only makes the subject matter more engaging for students but also encourages them to experiment modify and enhance the code with their own ideas This method of learning is designed to be less daunting and more stimulating particularly for those who might feel overwhelmed by the prospect of developing complex programs from scratch The book s approach is aimed at demystifying the complexities of optimization in industrial engineering making it more approachable and interesting for students and practitioners alike Diverging from other texts that primarily focus on classical techniques for addressing optimization problems in industrial engineering this book sets itself apart by delving into modern metaheuristic methods Metaheuristic techniques have gained recognition for their efficacy in tackling complex problems that are often laden with diverse and challenging constraints These methods which include algorithms such as simulated annealing and particleswarm optimization offer a more dynamic and flexible approach to finding solutions compared to traditional methods They are particularly adept at navigating vast search spaces and identifying optimal or near optimal solutions in scenarios where conventional approaches might struggle This inclusion of metaheuristic methods gives the book a unique quality providing

readers with a comprehensive understanding of both the established foundations and the cutting edge advancements in the field of optimization. The book's exploration of these advanced techniques not only broadens the reader's knowledge base but also equips them with the tools to effectively solve more intricate and nuanced problems encountered in industrial engineering. This dual focus on classical and modern methods positions the book as a valuable and forward thinking resource in the realm of industrial optimization.

Contemporary Bayesian and Frequentist Statistical Research Methods for Natural Resource Scientists Howard B. Stauffer, 2007-12-10. The first all inclusive introduction to modern statistical research methods in the natural resource sciences. The use of Bayesian statistical analysis has become increasingly important to natural resource scientists as a practical tool for solving various research problems. However many important contemporary methods of applied statistics such as generalized linear modeling, mixed effects modeling and Bayesian statistical analysis and inference remain relatively unknown among researchers and practitioners in this field. Through its inclusive hands on treatment of real world examples, *Contemporary Bayesian and Frequentist Statistical Research Methods for Natural Resource Scientists* successfully introduces the key concepts of statistical analysis and inference with an accessible easy to follow approach. The book provides case studies illustrating common problems that exist in the natural resource sciences and presents the statistical knowledge and tools needed for a modern treatment of these issues. Subsequent chapter coverage features: An introduction to the fundamental concepts of Bayesian statistical analysis including its historical background; conjugate solutions; Bayesian hypothesis testing and decision making; and Markov Chain Monte Carlo solutions. The relevant advantages of using Bayesian statistical analysis rather than the traditional frequentist approach to address research problems. Two alternative strategies: the a posteriori model selection strategy and the a priori parsimonious model selection strategy using AIC and DIC to model selection and inference. The ideas of generalized linear modeling (GLM) focusing on the most popular GLM of logistic regression. An introduction to mixed effects modeling in S Plus and R for analyzing natural resource data sets with varying error structures and dependencies. Each statistical concept is accompanied by an illustration of its frequentist application in S Plus or R as well as its Bayesian application in WinBUGS. Brief introductions to these software packages are also provided to help the reader fully understand the concepts of the statistical methods that are presented throughout the book. Assuming only a minimal background in introductory statistics, *Contemporary Bayesian and Frequentist Statistical Research Methods for Natural Resource Scientists* is an ideal text for natural resource students studying statistical research methods at the upper undergraduate or graduate level and also serves as a valuable problem solving guide for natural resource scientists across a broad range of disciplines including biology, wildlife management, forestry management, fisheries management and the environmental sciences.

Journal of the American Statistical Association, 2009. *Modern Mathematical Statistics* Edward J. Dudewicz, Satya N. Mishra, 1988-01-18. This text covers the science of statistics. In addition to classical probability theory, such topics as order statistics and limiting

distributions are discussed along with applied examples from a wide variety of fields *Binary Data Analysis of Randomized Clinical Trials with Noncompliance* Kung-Jong Lui, 2011-03-31 It is quite common in a randomized clinical trial RCT to encounter patients who do not comply with their assigned treatment Since noncompliance often occurs non randomly the commonly used approaches including both the as treated AT and as protocol AP analysis and the intent to treat ITT or as randomized analysis are all well known to possibly produce a biased inference of the treatment efficacy This book provides a systematic and organized approach to analyzing data for RCTs with noncompliance under the most frequently encountered situations These include parallel sampling stratified sampling cluster sampling parallel sampling with subsequent missing outcomes and a series of dependent Bernoulli sampling for repeated measurements The author provides a comprehensive approach by using contingency tables to illustrate the latent probability structure of observed data Using real life examples computer simulated data and exercises in each chapter the book illustrates the underlying theory in an accessible and easy to understand way Key features Consort flow diagrams and numerical examples are used to illustrate the bias of commonly used approaches such as AT analysis AP analysis and ITT analysis for a RCT with noncompliance Real life examples are used throughout the book to explain the practical usefulness of test procedures and estimators Each chapter is self contained allowing the book to be used as a reference source Includes SAS programs which can be easily modified in calculating the required sample size Biostatisticians clinicians researchers and data analysts working in pharmaceutical industries will benefit from this book This text can also be used as supplemental material for a course focusing on clinical statistics or experimental trials in epidemiology psychology and sociology *Computational Statistics & Data Analysis* ,2002
