Touching the Future Technology for Autism? J. Mintz, M. Gyori, M. Aagaard, 2012-12-05 International interest in the use of assistive and ambient information and communication technologies to support people with a range of cognitive impairments is growing rapidly Autism spectrum disorders ASDs which affect social skills communicative abilities and behavior are of particular interest The number of diagnosed cases has continued to grow in recent decades and the impairments associated with ASDs mean individuals affected are at risk of social isolation and marginalization Although helping people with autism to overcome their difficulties has always required the joint expertise of various fields the widely shared view is that innovative ICT may hold the key to more efficient support and intervention in the near future This book summarizes the results and conclusions of HANDS an international research and development project supported by the 7th Framework Programme of the European

Commission The aim of the HANDS project was to develop and test a smartphone based cognitive support system for intellectually able young people with ASDs with a focus on use in secondary school environments The results presented here include the HANDS system a partly mobile partly web based cognitive support system based on principles of Persuasive Design a unique multi mode research methodology applying both various quantitative and qualitative techniques to test the applicability and efficiency of the system an exploration of relevant conceptual issues from the point of view of Persuasive Design and its philosophical foundations a mapping of key ethical issues related to developing and applying mobile ICT for individuals with autism and other cognitive impairments The experiences of teachers who implemented the system in school environments are also summarized These results can be seen as snapshots of an evolutionary process but the conclusions drawn here are significant for future developments with mobile assistive technology for people with ASD as well as for other conditions The book will be of interest to professionals working with young people with ASD human computer interaction professionals as well as others working in the broader field of mobile assistive technology

Situational Awareness for Assistive Technologies Mehul Bhatt,Hans Werner Gsgen,2012 The development of smart assistive technology for personal living and public environments is an opportunity that has been recently recognized by research labs across the world A particular theme that has garnered attention in many countries is the problem of an aging population The combination of a much larger elderly population and the ever increasing cost of providing full time human care for them means that finding practical assisted living solutions for this group is becoming increasingly important Computing is the obvious choice to provide an answer to this growing problem but to have a real impact computer based assistive technologies will need to possess the ability to interact with and interpret the actions and situations of those they are designed to assist The papers in this book explore the diversity of the field of ambient intelligence as well as the wide range of approaches and variety of applications that may prove to be possible Consideration is given to how space action time and other contexts can be represented and reasoned about for use in sensory mapping multi agent interactions assisted living and even emergency responses Many techniques are examined variety represents one of the most important strengths of this area meaning that the weakness of one approach can be offset by the capability of others The book consists of research contributions dealing with the crucial notion of situational awareness within assistive smart systems emerging as an overarching concept An applied computer science character has been retained whilst bringing to the fore research projects where formal knowledge representation and reasoning techniques have been demonstrated to be applicable to areas within the broader field of ambient intelligence and smart environments

Handbook of Ambient Intelligence and Smart Environments Hideyuki Nakashima,Hamid Aghajan,Juan Carlos Augusto,2009-10-01 Our homes anticipate when we want to wake up Our computers predict what music we want to buy Our cars adapt to the way we drive In today s world even washing machines rice cookers and toys have the capability of autonomous decision making As we grow accustomed to computing power embedded in our

surroundings it becomes clear that these smart environments with a number of devices controlled by a coordinating system capable of ambient intelligence will play an ever larger role in our lives This handbook provides readers with comprehensive up to date coverage in what is a key technological field Systematically dealing with each aspect of ambient intelligence and smart environments the text covers everything from visual information capture and human computer interaction to multi agent systems network use of sensor data and building more rationality into artificial systems The book also details a wide range of applications examines case studies of recent major projects from around the world and analyzes both the likely impact of the technology on our lives and its ethical implications With a wide variety of separate disciplines all conducting research relevant to this field this handbook encourages collaboration between disparate researchers by setting out the fundamental concepts from each area that are relevant to ambient intelligence and smart environments providing a fertile soil in which ground breaking new work can develop

Advances in Ambient Intelligence Juan Carlos Augusto, Daniel Shapiro, 2007 Ambient Intelligence lies at the confluence of several trends the continued decrease in cost and size of computing technology the increasing availability of networking and communication infrastructure the growing public familiarity comfort with computing artifacts and practical advances in artificial intelligence These developments make it possible to contemplate the ubiquitous deployment of intelligent systems prototypically in smart homes but more broadly in public spaces private automobiles and on individual appliances and hand held devices in applications ranging from entertainment through eldercare to safety critical device control Ambient Intelligence is a young field As a result it has been natural to wonder what the technology can do to improve the way we live At the same time it is becoming increasingly important to ask What do we want since the intent is to embed technology in new and pervasive ways The contributions in this volume provide a window into the visions and trends currently dominating the area of Ambient Intelligence This publication is divided into three sections The first describes visions for the future of Ambient Intelligence the second addresses core technology of the field and the third provides an analysis of elements of the area which will demand special consideration during the future development of the area

Developing Ambient Intelligence Carsten Rudolph, 2008-04-12 At the time of the introduction of the Ambient Intelligence AmI concept many scenarios were considered to be visionary or even science fiction Enabled by current technology many aspects of these scenarios are slowly but inexorably becoming true However we are still facing important challenges that need further investments in research and industrialization Current software engineering techniques and tools are not prepared to deal with the development of applications for what we could call AmI ecosystems lacking a fixed architecture controlled limits and even owners The comfortable boundaries of static architectures and well defined limits and owners are not existent in these AmI ecosystems In its second year AmI d again shows the heterogeneity of research challenges related to Ambient Intelligence Many disciplines are involved and have to coordinate their efforts in resolving the strongly related research issues

Human Aspects in Ambient Intelligence Tibor Bosse, Diane J. Cook, Mark Neerincx, Fariba Sadri, 2013-09-13 This book presents recent developments in the field of human aspects in Ambient Intelligence This field and the associated workshop series addresses multidisciplinary aspects of AmI with human directed disciplines such as psychology social science neuroscience and biomedical sciences The aim of the workshop series is to get researchers together from these human directed disciplines or working on cross connections of AmI with these disciplines The focus is on the use of knowledge from these disciplines in AmI applications in order to support humans in their daily living in medical psychological and social respects The book plays an important role to get modellers in the psychological neurological social or biomedical disciplines interested in AmI as a high potential application area for their models From the other side the book may make researchers in Computer Science and Artificial and Ambient Intelligence more aware of the possibilities to incorporate more substantial knowledge from the psychological neurological social and biomedical disciplines in AmI architectures and applications

State of the Art in AI Applied to Ambient Intelligence Juan Carlos Augusto, Andrea Orlandini, 2017-10-15 We are moving towards a future where environments respond to human preferences and needs In this world smart devices equipped with intelligent features and the capability to sense communicate with and support humans in daily activities will be unremarkable We already expect our cars to warn us of hazards track our location and provide timely route advice and in future we will speak to simple machines and hold

conversations with more complex systems such as intelligent homes which will help us to monitor conditions track routine tasks and program the heating lighting garden watering and entertainment centre But questions have been raised in recent years as to how intelligent these so called smart systems or ambient intelligence environments really are This book State of the Art in AI Applied to Ambient Intelligence part of the outcome of the Workshop on Artificial Intelligence Techniques for Ambient Intelligence AITAmI which has now run for 10 consecutive editions aims to provide a clear picture of what has been achieved after a decade of discussion It is representative of the diversity of approaches and issues which are currently being considered and also indicates those avenues which are the most promising for exploration in the next decade The book provides all those working in the field with an up to date reference where they will find inspiration to create better systems for the society of tomorrow
