Socio-Metabolic Perspectives on the Sustainability of Local Food Systems Eva Fraňková, Willi Haas, Simron J. Singh, 2018-01-09 This book delves into diverse local food systems and critically assesses their ecological and societal benefits and trade offs their limits and opportunities for improving sustainability of food production and framework conditions which either hinder or promote their development More and more people with gradually meat heavier diets will demand growth in food production whilst our increasingly industrialized and globalized agri food system has already caused serious sustainability problems in the past This calls for a change in the way we produce distribute and consume food A re emerging debate on food security and food sovereignty seems to support this quest But what are the promising alternatives to mainstream developments Such a discussion regarding sustainability of local food systems requires a sound systemic understanding and thus invites a socio metabolic reading of local cases by analyzing the nexus between material and energy flows as well as land and time use This approach is needed to complement the so far mostly qualitatively based local food studies Applying socio metabolic approaches to local food systems fosters a better understanding of promises and pitfalls for sustainable pathways in the future

Plant breeding is experiencing a high level of novelty and innovation at a global scale reshaping its technical possibilities goals and intended impact A critical aspect of this change involves improving the usefulness of new varieties delivered by public sector breeding to specific customer groups to achieve faster more inclusive adoption and equitable benefit sharing in low income developing agriculture The problem addressed by this Collection is that the goal of more inclusive adoption

requires breeding to improve its relevance to rural women by implementing gender intentional breeding In the past breeding programs often overlooked the specific preferences roles and responsibilities of women in agriculture although women can be key contributors to farming and livestock management As a result new crop varieties or livestock breeds were not always aligned with women s specific needs such as ease of cultivation processing or storage Poor alignment with users preferences and needs not only hinders the adoption of new varieties but limits their possibilities to benefit from these innovations
