electromagnetic seismograph with the aim of making visible the smallest ground motions by recording them on paper and indicating direction intensity and duration He was able to show the relationship between earthquakes and the different phases of volcanic activity He identified the harmonic tremor which he indicated was a precursor of volcanic activity the characteristic feature of the ground motions preceding eruption is its continuity before the eruption of 1861 the electromagnetic seismograph began to show a continuous tremor The Palmieri seismograph was also utilized in Japan until 1883 when it was replaced by the new Gray Milne seismographs and later by the Omori instruments SASW
