Community College Mathematics Brian Cafarella, 2022-06-29 This book explores the rich history of community college math with a specific focus on gatekeeper math classes Gatekeeper math classes include courses such as college algebra introduction to statistics and all developmental math classes For community colleges successful completion of these classes is imperative for student retention This book presents a decade by decade analysis of the history of community college mathematics The author employs a mix of conceptual empirical and quantitative research The empirical research stems from interviews with 30 community college faculty members from seven community colleges From the 1970s to the pandemic in the early 2020s the book explores math curricula as well as trends initiatives teaching practices and mandates that have impacted community college math The positives and negatives of such trends initiatives and mandates are presented along with suggestions on how to apply such knowledge going forward The author addresses the key questions How can we build a future model for community college

gatekeeper math classes that is both successful and sustainable Additionally how can we learn from the past and the present to build such a model This book will be ideal for students in graduate programs focusing on community college leadership or developmental education leadership as well as all those hoping to improve success rates in community college mathematics programs **El-Hi Textbooks in Print** ,1970 Includes related teaching materials Algebra William G. McCallum,Eric Connally,Deborah Hughes-Hallett,2015-02-13 Algebra Form and Function was designed based on the fundamental goal for a student to foster understanding of algebraic structure that is an understanding of how the arrangements of symbols allows us to predict for example the behavior of a function or the number of solutions to an equation Mastering algebraic structure enables students to read algebraic expressions and equations in real life contexts not just manipulate them and to choose which form or which operation will best suit the context It facilitates being able to translate back and forth between symbolic graphical numerical and verbal representations By balancing practice in manipulation and opportunities to see the big picture Algebra Form and Function offers a way for teachers to help students achieve real mastery of algebra

Nickerson,2001 This dissertation involved an 8 week investigation in a high school classroom to explore how students prior experiences with dynamic graphs of linear equations supported their efforts to understand systems of linear equations The researcher and the classroom teacher developed two technology intensive instructional sequences that were taught by the classroom teacher The daily collaborative meetings of the researcher and the teacher informed revisions to the instructional sequence This study used the situated perspective to analyze the collective mathematical development of the class and to compare the ways in which individuals participated in the collective development According to theorists of the situated

perspective knowing mathematics is considered an aspect of participation in social practices In order to describe the collective development the construct of a practice was used to examine the structure responsibilities and common activities of the mathematics classroom I describe four target students individual growth in terms of a trajectory of participation in the practices of mathematical thinking Our conjectures about the means of supporting student learning in the form of curriculum and software were empirically tested By providing insight into the process by which a group of students collectively develop understandings of important mathematical ideas analyses such as this can help teachers and instructional designers anticipate possible ways other groups of students will develop meaning This work also informs classroom teachers in that situated research such as this embraces the complexity of the classroom It accounts for what students contribute and what teachers can do to support student learning This analysis is not prescriptive in the sense of theory informing educational practice Instead in this theoretical framework a reflexive relationship exists between theory and practice Teachers can see how ideas emerged and student conceptions developed within a particular context
