The Four Pillars of Portfolio Management Olivier Lazar, 2018-09-28 Portfolio management consists mainly of making decisions about which initiatives to undertake which initiatives not to pursue and which resources are to be allocated to which portfolio component At least that s how it is most commonly presented in textbooks and courses Indeed it is all of that but it is also so much more Portfolio management is of course about making these decisions but more accurately it is about making them with the goal of creating value for an organization s wide population of stakeholders both internal and external This value is not only expressed in financial terms but also in social terms The portfolio should create value for all stakeholders who thereby support the portfolio organization and enable it to sustain itself Portfolio management is about the realization of strategic vision achieving a purpose and developing an intelligent way of using resources to benefit stakeholders This requires the ability to find a balance among the different dimensions of portfolio governance and among the constraints constantly shaping and reshaping the business environment This is what portfolio management is truly about this is what organizational management is about The Four Pillars of Portfolio Management Organizational Agility Strategy Risk and Resources takes readers on a journey navigating the dimensions and constraints to be balanced and integrated as part of the portfolio and organizational decision making process By balancing the requirements of strategic alignment with the exposure to risk and by reconciling resource demands with capability a portfolio manager can develop and sustain an organization despite the constant and dynamic evolution of the business environment This book explains how to manage portfolios that create the agility all organizations require to survive and thrive

Portfolios of Agile Projects Roger Sweetman, Kiernan Conboy, 2018 While agile approaches can be extremely effective at a project level they can impose significant complexity and a need for adaptiveness at the project portfolio level While this has proven to be highly problematic there is little research on how to manage a set of agile projects at the project portfolio level What limited research that does exist often assumes that portfolio level agility can be achieved by simply scaling project level agile approaches such as Scrum This study uses a complex adaptive systems lens focusing specifically on the properties of projects as agents in a complex adaptive portfolio to critically appraise current thinking on portfolio management in an agile context We then draw on a set of 30 expert interviews to develop 16 complex adaptive systems CAS based propositions as to how portfolios of agile projects can be managed effectively We also outline an agenda for future research and discuss the differences between a CAS based approach to portfolio management and traditional approaches
