Algebraic Geometry Robin Hartshorne:

Algebraic Geometry Robin Hartshorne, 2013-06-29 Robin Hartshorne studied algebraic geometry with Oscar Zariski and David Mumford at Harvard and with J P Serre and A Grothendieck in Paris After receiving his Ph D from Princeton in 1963 Hartshorne became a Junior Fellow at Harvard then taught there for several years In 1972 he moved to California where he is now Professor at the University of California at Berkeley He is the author of Residues and Duality 1966 Foundations of Projective Geometry 1968 Ample Subvarieties of Algebraic Varieties 1970 and numerous research titles His current research interest is the geometry of projective varieties and vector bundles He has been a visiting professor at the College de France and at Kyoto University where he gave lectures in French and in Japanese respectively Professor Hartshorne is married to Edie Churchill educator and psychotherapist and has two sons He has travelled widely speaks several foreign languages and is an experienced mountain climber He is also an accomplished amateur musician he has played the flute for many years and during his last visit to Kyoto he began studying the shakuhachi

Deformation Theory Robin Hartshorne, 2009-11-12 In the fall semester of 1979 I gave a course on deformation theory at Berkeley My goal was to understand completely Grothendieck's local study of the Hilbert scheme using the cohomology of the normal bundle to characterize the Zariski tangent space and the obstructions to deformations At the same time I started writing lecture notes for the course However the writing project soon foundered as the subject became more intricate and the result was no more than 6 of a projected thirteen sections corresponding roughly to sections 1 2 3 5 6 of the present book These handwritten notes circulated quietly for many years until David Eisenbud urged me to complete them and at the same time without consulting me mentioned to an editor at Springer You know Robin has these notes on deformation theory which could easily become a book When asked by Springer if I would write such a book I immediately refused since I was then planning another book on space curves But on second thought I decided this was after all a worthy project and that by writing I might finally understand the subject myself So during 2004 I expanded the old notes into a rough draft which I used to teach a course during the spring semester of 2005 Those notes rewritten once more with the addition of exercises form the book you are now reading My goal in this book is to introduce the main ideas of deformation theory in algebraic geometry and to illustrate their use in a number of typical situations

Geometry: Euclid and Beyond Robin Hartshorne, 2013-11-11 In recent years I have been teaching a junior senior level course on the classical geometries This book has grown out of that teaching experience I assume only high school geometry and some abstract algebra The course

begins in Chapter 1 with a critical examination of Euclid's Elements. Students are expected to read concurrently Books I-IV of Euclid's text which must be obtained separately. The remainder of the book is an exploration of questions that arise naturally from this reading together with their modern answers. To shore up the foundations we use Hilbert's axioms. The Cartesian plane over a field provides an analytic model of the theory and conversely we see that one can introduce coordinates into an abstract geometry. The theory of area is analyzed by cutting figures into triangles. The algebra of field extensions provides a method for deciding which geometrical constructions are possible. The investigation of the parallel postulate leads to the various non-Euclidean geometries. And in the last chapter we provide what is missing from Euclid's treatment of the five Platonic solids in Book XIII of the Elements. For a one-semester course such as I teach, Chapters 1 and 2 form the core material which takes six to eight weeks.

This volume contains the proceedings of the First Workshop Matemáticos Mexicanos Jovenes en el Mundo held from August 22-24, 2012 at Centro de Investigación en Matemáticas CIMAT in Guanajuato, Mexico. One of the main goals of this meeting was to present different research directions being pursued by young Mexican mathematicians based in other countries such as Brazil, Canada, Colombia, Estonia, Germany, Spain, and the United States, showcasing research lines currently underrepresented in Mexico. Featured are survey and research articles in six areas: algebra, analysis, applied mathematics, geometry, probability, and topology. Their topics range from current developments related to well-known open problems to novel interactions between pure mathematics and computer science. Most of the articles provide a panoramic view of the fields and problems the authors work on, making the book accessible to advanced graduate students and researchers in mathematics from different fields. This book is published in cooperation with Sociedad Matemática Mexicana. *Commutative Algebra with a View Toward Algebraic Geometry* David Eisenbud, 1989. Algebraic Geometry Hartshorne, 2005-01-01. Galois Groups and Fundamental Groups Tamás Szamuely, 2009-07-16. Ever since the concepts of Galois groups in algebra and fundamental groups in topology emerged during the nineteenth century, mathematicians have known of the strong analogies between the

two concepts This book presents the connection starting at an elementary level showing how the judicious use of algebraic geometry gives access to the powerful interplay between algebra and topology that underpins much modern research in geometry and number theory Assuming as little technical background as possible the book starts with basic algebraic and topological concepts but already presented from the modern viewpoint advocated by Grothendieck This enables a systematic yet accessible development of the theories of fundamental groups of algebraic curves fundamental groups of schemes and Tannakian fundamental groups The connection between fundamental groups and linear differential equations is also developed at increasing levels of generality Key applications and recent results for example on the inverse Galois problem are given throughout **Algebraic Geometry, Arcata 1974** Robin Hartshorne, American Mathematical Society, 1975-12-31
