

Constructing an Alien Periodic Table

Introduction

The structure of the Periodic Table is so readily explained in terms of quantum mechanics that it is sometimes difficult for students to appreciate the effort and genius of the scientists who put together its earliest versions. In this experiment, you are challenged to construct a Periodic Table for an alien environment, without the aid of quantum mechanics.

Principles

Imagine that you are the science officer on an intergalactic spacecraft, whose mission is to improve the level of scientific research on any planets you may encounter during your voyage. You have landed on Olam, a planet very similar to Earth. Some 50-odd elements are known on Olam. The study of these individual elements consumes most of the time of the Olamite chemists. Having an effective method for classifying these elements in families would give cohesion to Olamite chemical knowledge. Olamite chemists hope that mastering the properties of 10 or 20 families would be simpler than having to worry about the properties and reactions of 54 elements. They have presented you with their accumulated knowledge as shown in Tables 4.1 through 4.4. Can you help them develop an Olamite Periodic Table?

Table 4.1 The Olamite Elements
