[Physical Modelling in Geotechnics, Volume 1](#) Andrew McNamara, Sam Divall, Richard Goodey, Neil Taylor, Sarah Stallebrass, Jignasha Panchal, 2018-07-11. Physical Modelling in Geotechnics collects more than 1500 pages of peer-reviewed papers written by researchers from over 30 countries and presented at the 9th International Conference on Physical Modelling in Geotechnics 2018, City University of London, UK, 17-20 July 2018. The ICPMG series has grown such that two volumes of proceedings were required to publish all contributions. The books represent a substantial body of work in four years. Physical Modelling in Geotechnics contains 230 papers, including eight keynote and themed lectures representing the state of the art in physical modelling research in aspects as diverse as fundamental modelling, including sensors, imaging, modelling techniques, and scaling, onshore and offshore foundations, dams and embankments, retaining walls, and deep excavations, ground improvement, and environmental engineering, tunnels, and geohazards, including significant contributions in the area of seismic engineering. ISSMGE TC104 have identified areas for special attention, including education in physical modelling and the promotion of physical modelling to industry. With this in mind, there is a special themed paper on education focusing on both undergraduate and postgraduate teaching, as well as practicing geotechnical engineers. Physical modelling has entered a new era with the advent of exciting work on real-time interfaces between physical and numerical modelling, and the growth of facilities and expertise that enable development of so-called megafuges of 1000-tonne capacity or more, capable of modelling the largest and most complex of geotechnical challenges. Physical Modelling in Geotechnics will be of interest to professionals, engineers, and academics interested or involved in geotechnics, geotechnical engineering, and related areas. The 9th International Conference on Physical Modelling in Geotechnics was organised by the Multi-Scale Geotechnical Engineering Research Centre at City University of London under the auspices of Technical Committee 104 of the International Society for Soil Mechanics and Geotechnical Engineering (ISSMGE). City University of London are pleased to host the prestigious international conference for the first time, having initiated and hosted the first regional conference Eurofuge ten years ago in 2008. Quadrennial regional

conferences in both Europe and Asia are now well established events giving doctoral researchers in particular the opportunity to attend an international conference in this rapidly evolving specialist area This is volume 1 of a 2 volume set

Building Materials Building Actors Construction History is still a fairly new and small but quickly evolving field The current trends in Construction History are well reflected in the papers of the present conference Construction History has strong roots in the historiography of the 19th century and the evolution of industrialization but the focus of our research field has meanwhile shifted notably to include more recent and also more distant histories as well This is reflected in these conference proceedings where 65 out of 148 contributed papers deal with the built heritage or building actors of the 20th or 21st century The conference also mirrors the wide spectrum of documentary and analytical approaches comprised within the discipline of Construction History Papers dealing with the technical and functional analysis of specific buildings or building types are complemented by other studies focusing on the lives and formation of building actors from laborers to architects and engineers from economical aspects to social and political implications on legal aspects and the strong ties between the history of construction and the history of engineering sciences The conference integrates perfectly into the daily work at the Institute for Preservation and Construction History at ETH Zurich Its two chairs the Chair for Building Archaeology and Construction History and the Chair for Construction Heritage and Preservation endeavor to cover the entire field and to bridge the gaps between the different approaches methodologies and disciplines between various centuries as well as technologies learning together and from each other The proceedings of 8ICCH give a representative picture of the state of the art in the field and will serve as a reference point for future studies

Post-Earthquake Fire Analysis in Urban Structures Behrouz Behnam, 2017-02-03 Post earthquake fire is one of the most complicated problems resulting from earthquakes and presents a serious risk to urban structures Most standards and codes ignore the possibility of post earthquake fire thus it is not factored in when determining the ability of buildings to withstand load This book describes the effects of post earthquake fire on partially damaged buildings located in seismic urban regions The book quantifies the level of associated post earthquake fire effects and discusses methods for mitigating the risk at both the macro scale and micro scale The macro scale strategies address urban regions while the micro scale strategies address building structures covering both existing buildings and those that are yet to be designed
