Every reader will find something of interest in this book from superdiffusion of the ocean surface to fetal heartbeats from solar wind to the wearing out of tools from radioactive contamination to texture analysis from image rendering to neural developments

The all pervading link connecting these disparate disciplines is the realization that a linear approach to the majority of natural processes is at best only an approximation that can frequently be downright misleading

Consequently the rise of what is broadly called the theory of complexity has gained tremendous momentum in the last decade or two

This modern approach aims at and frequently succeeds in correctly explaining many natural processes

The papers in this volume are based on presentations of the sixth international conference exploring the above mentioned issues

These conferences are now regular and well established among the nonlinear series of conferences

This conference series is organized in different geographical regions to encourage international collaboration

Among the distinguishing features of the series is its multidisciplinary nature which has been growing steadily
