Intellectual Property and Clean Energy Matthew Rimmer, 2018-10-26 This collection considers the future of climate innovation after the Paris Agreement. It analyses the debate over intellectual property and climate change in a range of forums including the climate talks, the World Trade Organization and the World Intellectual Property Organization as well as multilateral institutions dealing with food, health and biodiversity. The book investigates the critical role patent law plays in providing incentives for renewable energy and access to critical inventions for the greater public good as well as plant breeders' rights and their impact upon food security and climate change. Also considered is how access to genetic resources raises questions about biodiversity and climate change. This collection also explores the significant impact of trademark law in terms of green trademarks, eco labels and greenwashing. The key role played by copyright law in respect of access to environmental information is also considered. The book also looks at deadlocks in the debate over intellectual property and climate change and provides theoretical policy and practical solutions to overcome such impasses. Research Anthology on Changing Dynamics of Diversity and Safety in the Workforce Management Association, Information Resources, 2021-07-16 The recent COVID-19 pandemic has emphasized the importance of safety and ergonomics in the workplace. Issues in Agent Communication Frank Dignum, Mark Greaves, 2006-12-31 A first attempt to develop a standardized agent communication language. ACL resulted in KQML, probably the most widely used such language. However, a lot of technical work remains to be done. Even worse so far, there seems to be little consensus on the basics of agent communication and there is no clear understanding of the semantics of individual speech acts or even of the basic concepts that should be used to define the semantics. This book documents two workshops on communication in MAS held in 1999: one on Specifying and Implementing Conversation Policies (SICP) and the other in Agent Communication Languages, and presents the current state

of the art of research in the field A detailed introductory overview by the volume editors highlights a number of issues that play an important role in agent communication

Balanced Automation Systems II Luis M. Camarinha-Matos,Hamideh Afsarmanesh,2013-06-29

xiv box for Balanced Automation research in this area is still young and emerging In our opinion the development of hybrid balanced solutions to cope with a variety of automation levels and manual approaches is a much more challenging research problem than the search for a purely automatic solution Various research activities described in this book illustrate some of these challenges through the development proposals assisting tools and initial results In certain chapters however the balancing aspects are not yet achieved in the research area but their inclusion in this book is intended to give a broader and more comprehensive perspective of the multiple areas involved One important aspect to be noticed is the extension and application of the concept of balanced automation to all areas of the manufacturing enterprise Clearly the need for a balanced approach is not restricted to the shop floor components rather it applies to all other areas as illustrated by the wide spectrum of research contributions found in this book For instance the need for an appropriate integration of multiple systems and their perspectives is particularly important for the implantation of virtual enterprises Although both the BASYS 95 and the BASYS 96 conferences have provided important contributions approaches and tools for the implantation of balanced automation systems there are a number of areas that require further research
