Thinking about Landscape Architecture Bruce Sharky,2016-02-05 What is landscape architecture Is it gardening or science or art In this book Bruce Sharky provides a complete overview of the discipline to provide those that are new to the subject with the foundations for future study and practice The many varieties of landscape practice are discussed with an emphasis on the significant contributions that landscape architects have made across the world in daily practice Written by a leading scholar and practitioner this book outlines the subject and explores how from a basis in garden design it leapt over the garden wall to encapsulate areas such as urban and park design community and regional planning habitat restoration green infrastructure and sustainable design and site engineering and implementation Coverage includes The effects that natural and human factors have upon design and how the discipline is uniquely placed to address these challenges Examples of contemporary landscape architecture work from storm water management and walkable cities to well known projects like the New York High Line and the London Olympic Park Exploration of how art and design science horticulture and construction come together in one subject Thinking about Landscape Architecture is perfect for those wanting to better understand this fascinating subject and those starting out as landscape architecture students

The Northwest Garden Manifesto John J. Albers,2017-12-18 Gardens are extensions of our homes places in which we get outside to relax entertain and get some physical exercise But our gardens are also extensions of the natural world Through our gardens as well as other neighborhood greenspaces we can help counter some of the woes faced by larger environments

rampant development loss of plant and animal habitat spread of invasive species exploitation of natural resources air and water pollution and the impacts of global warming Yes even small urban backyard landscapes can combat such man made strains on our local environment and it s easy to do In his new book *The Northwest Garden Manifesto* scientist and gardener John J Albers provides a comprehensive guide to encourage and enable homeowners to consider the local ecosystem in their own gardens and in their larger communities The ideas and concepts in this book reflect the most up to date thinking on urban ecology and how to best make our yards reflect the natural world around us The key to Albers s approach is for gardeners to first assess the current state of their property and then focus on the following key principles 1 Protect conserve and create healthy soil 2 Maintain healthy plants and create a sustainable landscape 3 Conserve water and other natural resources 4 Protect water and air quality 5 Protect and enhance wildlife habitat 6 Conserve energy 7 Use sustainable methods and materials Through clear explanation practical examples and full color photos Albers shows how to evaluate any yard in terms of these principles and then challenges the reader to improve each element one step at a time From creating better soil to starting a compost pile attracting pollinators to adding more native plants or creating a simple circulating water feature to building a fence from recycled wood gardeners will ultimately turn their backyards into beautiful healthy and happy habitat for all

Opportunities and Challenges for Environmental Sustainability: A Socioeconomic and Political Analysis Fritz Dufour, 2019-05-26 This report is a socioeconomic and political analysis of environmental sustainability in terms of the present state of the environment what we can do to reverse the negative trends and what the current and potential barriers are First it offers a background of the issue through a historical perspective How we got here has a lot to do with how previous generations behaved towards the environment Similarly how we behave will determine the kind of environment future generations will have to contend with It looks at the dynamics likely to impact the balance of nature Also because understanding what is biodiversity and why is it important are essential in order to grasp the concept of sustainability this report looks at the types of ecosystems that form the biosphere and brings an answer to this important question Is the Maximum sustainable yield MSY concept a fallacy Moreover the importance of cities is a key factor in environmental sustainability So the report shows the pros and cons of cities in both the preservation of the environment and the

conservation of its biodiversity The social economic and political analyses use the latest data and views from experts scientists and scholars alike and also the views of the common people The result is that all three levels have positives and negatives and so none of them should be individually prioritized over the other two To tackle this dilemma the report offers an alternative an inclusive pluralistic and global approach which aims at motivating all stakeholders from rich and poor countries and people from all walks of life to work together towards a common goal and common interests Such an approach says the report should be bottom up instead of top down that is the needs of local populations especially those closer to biodiversity must come first before those of large corporations However while in the present and short terms this approach may be successful in the long term or a distant future there are reasons to be skeptical for the environment is constantly changing and generations are different from one another And that is very important because what constitutes the cornerstone of environmental sustainability is this the present use of natural resources should not be harmful to future generations Therefore the report looks into the future While acknowledging that in terms of environmental sustainability predicting the future is a daunting task because it is better to think that the future is now the report shows how we can prepare a soft landing for our great grand children by laying the groundwork for them We can accomplish this last task because we still have time
