The air transport industry has high economic impact it supports more than 60 million jobs worldwide Since the early years of commercial air travel passenger numbers have grown tremendously However for decades airlines financial results have been swinging between profits and losses The airline industry's aggregate net average profit between 1970 and 2010 was close to zero which implies bankruptcies and layoffs in downturns The profit cycle's amplitude has been rising over time which means that problems have become increasingly severe and also shows that the industry may not have learned from the past More stable financial results could not only facilitate airline management decisions and improve investors confidence but also preserve employment This book offers a thorough understanding of the airline profit

cycle's causes and drivers and it presents measures to achieve a higher and more stable profitability level. This is the first in-depth examination of the airline profit cycle. The airline industry is modelled as a complex dynamic system which is used for quantitative simulations of what-if scenarios. These experiments reveal that the general economic environment such as GDP or fuel price developments influence the airline industry's profitability pattern as well as certain regulations or aircraft manufacturers' policies. Yet despite all circumstances, simulations show that airlines' own management decisions are sufficient to generate higher and more stable profits in the industry. This book is useful for aviation industry decision makers, investors, policy makers, and researchers because it explains why the airline industry earns or loses money. This knowledge will advance forecasting and market intelligence. Furthermore, the book offers practitioners different suggestions to sustainably improve the airline industry's profitability. The book is also recommended as a case study for system analysis as well as industry cyclicity at graduate or postgraduate level for courses such as engineering, economics, or management.

Global Air Transport Management and Reshaping Business Models for the New Era Kankaew, Kannapat, 2022-05-27 The air transport industry is highly vulnerable to environmental changes as was seen when the recent COVID-19 pandemic caused most airline operations to cease. However, for decades, airlines have been collapsing around the globe as the business of managing airline operations has become stressed due to price competition. This is detrimental to air carriers since air transport products and services are the same. Moreover, it impacts other industries such as tourism, hotels, and restaurants which contribute to the derailment of economic and social activities. Thus, it is essential to determine new practices and strategies that can allow air transport management to be enriched and to flourish. Global Air Transport Management and Reshaping Business Models for the New Era provides a comprehensive collection of knowledge on the new era of business management on air transport. It provides strategies, technologies, and tools used in the reshaping of the air transport business model. Covering topics such as customer experience, robotic process automation, and airline alliances, this major reference work is an essential resource for airline managers, supply chain specialists, air transport managers, students, and faculty of higher education, libraries, researchers, economists, government officials, and academicians.

Leadership and Organization in the Aviation Industry Dr Marc-Philippe Lumpé, 2012-10-01 Leadership and organisational structures which are not adjusted to the cultural background of the employees concerned are most likely to produce sub optimal results House 2004 Therefore it is necessary to develop appropriate leadership and organisational structures in order to fully grasp the cultural environment to be encountered in the professional world This book presents a research project that was carried out to develop leadership and organisational structures in accordance with the requirements created by different professional backgrounds within the aviation industry The identification of the different professional cultures was undertaken using a standardised questionnaire The development of the questionnaire was carried out with the help of the GLOBE study House et al 2004 one of the most extensive research efforts ever undertaken in the field of organisational and national cultures The main characteristic of the GLOBE study is the development of nine dimensions which serve to identify and characterise any culture These dimensions are referred to as core cultural dimensions Using this newly developed questionnaire it was not only possible to isolate 12 different professional cultures but also to identify their distinguishing traits which served as the base for the subsequent development of leadership and organisational structures The survey was complemented by open interviews served to broaden and deepen the results gained with the standardised questionnaire The research outcomes open the door to a new and important element of cultural research complementary to those of organisational and national cultures Although the study was carried out in the aviation industry the results gained also appear to be transferable to other industries due to the large variety of professions isolated within the course of the presented study and the specific nature of the aviation industry itself

Intermodale Wettbewerbsdynamik im europäischen Personenverkehr Caroline Porwoll, 2019-03-09 Der Wettbewerb zwischen Bahn und Fluggesellschaften im europäischen Personenverkehr hat sich in den letzten Jahren erheblich intensiviert. Angriffs- und Gegenmaßnahmen im gemeinsamen Wettbewerb haben zu einer intermodalen Wettbewerbsdynamik geführt, die mit dem verstärkten Aufkommen des Low Cost Konzepts im Flugverkehr eine neue Dimension gewonnen hat. Insbesondere aus Sicht der traditionell staatlichen Bahnunternehmen stellt dies eine neue strategische Herausforderung dar. Anliegen dieser Arbeit sind die Erklärung von Funktionsweise und Bestimmungsfaktoren dieser intermodalen Wettbewerbsdynamik sowie die Herausarbeitung strategischer Implikationen für Schienenverkehrsunternehmen, um zielgerichteter auf die Wettbewerbsbedrohung durch den Luftverkehr reagieren zu können. Gerade vor dem Hintergrund der bisher kaum vorhandenen wissenschaftlichen Erkenntnisse zu dieser hochaktuellen Thematik kommt dabei der empirischen Analyse der Wettbewerbsentwicklung zwischen europäischen Bahn und Fluggesellschaften und der von ihnen gezeigten Strategien eine bedeutende Rolle zu. Das Buch wendet sich ebenso an Dozenten und Studierende der Wirtschaftswissenschaften mit den Schwerpunkten Strategisches Management und Verkehrswissenschaften wie auch an Praktiker im Bereich des wettbewerbsstrategischen Managements von Schienen- und Luftverkehrsunternehmen.
