Introduction to Logic Circuits & Logic Design with

Verilog Brock J. LaMeres, 2017-04-17 This textbook for courses in Digital Systems Design introduces students to the fundamental hardware used in modern computers. Coverage includes both the classical approach to digital system design i.e. pen and paper in addition to the modern hardware description language HDL design approach computer based. Using this textbook enables readers to design digital systems using the modern HDL approach but they have a broad foundation of knowledge of the underlying hardware and theory of their designs. This book is designed to match the way the material is actually taught in the classroom. Topics are presented in a manner which builds foundational knowledge before moving onto advanced topics. The author has designed the presentation with learning Goals and assessment at its core. Each section addresses a specific learning outcome that the student should be able to do after its completion. The concept checks and exercise problems provide a rich set of assessment tools to measure student performance on each outcome. The Art of

Systems Architecting Mark W. Maier, 2009-01-06 If engineering is the art and science of technical problem solving systems architecting happens when you don't yet know what the problem is. The third edition of a highly respected bestseller *The Art of Systems Architecting* provides in depth coverage of the least understood part of systems design moving from a vague concept and limited resources.

Recent Developments in Switching Theory Amar Mukhopadhyay, 2013-10-22 *Electrical Science Series* Recent Developments in Switching Theory covers the progress in the study of the switching theory. The book discusses the simplified proof of Post's theorem on completeness of logic primitives, the role of feedback in combinational switching circuits and the systematic procedure for the design of Lupanov decoding networks. The text also describes the classical results on counting theorems and their application to the classification of switching functions under different notions of equivalence including linear and affine equivalences. The development of abstract harmonic analysis of combinational switching functions, the theory of universal logic modules, methods of their construction and upper bounds on the input terminals and cellular logic are also considered. The book further tackles the systematic techniques for the realization of multi output logic function by means of multirail cellular cascades, the programmable cellular logic and the logical design of programmable arrays. Electrical engineers, electronics engineers, computer professionals and student taking related courses will find the book invaluable. Soft Computing in Engineering Design and Manufacturing Pravir K.

Chawdhry, Rajkumar Roy, Raj K. Pant, 2012-12-06 Soft Computing has emerged as an important approach towards achieving intelligent computational paradigms where key elements are learning from experience in the presence of uncertainties. Fuzzy belief functions and evolution of the computing strategies of the learning agent itself. Fuzzy neural and evolutionary computing are the three major themes of soft computing. The book presents original research papers dealing with the theory of soft computing and its applications in engineering design and manufacturing. The methodologies have been applied to a large variety of real life problems. Application of soft computing has provided the opportunity to integrate human like

vagueness and real life uncertainty to an otherwise hard computer programme Now a computer programme can learn adapt and evolve using soft computing The book identifies the strengths and limitations of soft computing techniques particularly with reference to their engineering applications The applications range from design optimisation to scheduling and image analysis Goal optimisation with incomplete information and under uncertainty is the key to solving real life problems in design and manufacturing Soft computing techniques presented in this book address these issues Computational complexity and efficient implementation of these techniques are also major concerns for realising useful industrial applications of soft computing The different parts in the book also address these issues The book contains 9 parts 8 of which are based on papers from the 2nd On line World Conference on Soft Computing in Engineering Design and Manufacture WSC2

Adapting Hardware Systems by Means of Multi-Objective Evolution Paul Kaufmann, 2013 Reconfigurable circuit devices have opened up a fundamentally new way of creating adaptable systems Combined with artificial evolution reconfigurable circuits allow an elegant adaptation approach to compensating for changes in the distribution of input data computational resource errors and variations in resource requirements Referred to as Evolvable Hardware EHW this paradigm has yielded astonishing results for traditional engineering challenges and has discovered intriguing design principles which have not yet been seen in conventional engineering In this thesis we present new and fundamental work on Evolvable Hardware motivated by the insight that Evolvable Hardware needs to compensate for events with different change rates To solve the challenge of different adaptation speeds we propose a unified adaptation approach based on multi objective evolution evolving and propagating candidate solutions that are diverse in objectives that may experience radical changes Focusing on algorithmic aspects we enable Cartesian Genetic Programming CGP model which we are using to encode Boolean circuits for multi objective optimization by introducing a meaningful recombination operator We improve the scalability of CGP by objectives scaling periodization of local and global search algorithms and the automatic acquisition and reuse of subfunctions using age and cone based techniques We validate our methods on the applications of adaptation of hardware classifiers to resource changes recognition of muscular signals for prosthesis control and optimization of processor caches

Innovations in E-learning, Instruction Technology, Assessment and Engineering Education Magued Iskander, 2007-09-04 This book includes a set of rigorously reviewed world class manuscripts addressing and detailing state of the art research projects in the areas of Engineering Education Instructional Technology Assessment and E learning The book presents selected papers from the conference proceedings of the International Conference on Engineering Education Instructional Technology Assessment and E learning EIAE 2006 All aspects of the conference were managed on line
