data to create county level baseline indicators of Gulf Coast disaster resilience and an original survey of county emergency managers and elected municipal officials in 60 counties and 120 municipalities across the Gulf States The findings of the original survey measure the disaster resilience perceptions held by local government officials which are examined to identify commonalities and differences across the set of cases Additional analyses compare these perceptions to objective baseline indicators of disaster resilience to assess how perceptions align with resilience realities Local Disaster Resilience not only fills a critical gap in the literature by applying existing theories and models to a region that has experienced the worst disasters the United States has faced in the past decade but it can also be used as a tool to advance our knowledge of disasters in an interdisciplinary manner
