Design and Analysis of Tall and Complex Structures Feng Fu, 2018-02-01 The design of tall buildings and complex structures involves challenging activities including scheme design modelling structural analysis and detailed design This book provides structural designers with a systematic approach to anticipate and solve issues for tall buildings and complex structures This book begins with a clear and rigorous exposition of theories behind designing tall buildings After this is an explanation of basic issues encountered in the design process This is followed by chapters concerning the design and analysis of tall building with different lateral stability systems such as MRF shear wall core outrigger bracing tube system diagrid system and mega frame The final three chapters explain the design principles and analysis methods for complex and special structures With this book researchers and designers will find a valuable reference on topics such as tall building systems structure with complex geometry Tensegrity structures membrane structures and offshore structures Numerous worked through examples of existing prestigious projects around the world such as Jeddah Tower Shanghai Tower and Petronas Tower etc are provided to assist the reader s understanding of the topic Provides the latest modelling methods in design such as BIM and Parametric Modelling technique Detailed explanations of widely used programs in current design practice such as SAP2000 ETABS ANSYS and Rhino Modelling case studies for all types of tall buildings and complex structures such as Buttressed Core system diagrid system Tube system Tensile structures and offshore structures etc

Structural Design of Buildings Feng Fu, David Richardson, 2024-07-25 Structural Design of Buildings Holistic Design is the essential reference for structural engineers involved in the design of buildings and other structures It forms part of the Structural Design of Buildings series and introduces the concepts and principles involved in holistic structural design of a building

Seismic Behaviour and Design of Irregular and Complex Civil Structures III Dietlinde Köber, Mario De Stefano, Zbigniew Zembaty, 2020-03-06 This book presents state of the art knowledge on problems of the effects of structural irregularities on their seismic response It also covers specific spatial and rotational seismic loads on these structures Rapid progress in respective research on irregular structures and unconventional seismic loads requires prompt updates of the state of the art in this area These problems are of particular interest to both researchers and practitioners because these are non conservative effects compared with the approach of the traditional seismic design e g Eurocode 8 Uniform Building Code etc This book will be of particular interest to researchers PhD students and engineers dealing with design of structures under seismic excitations

Large-Scale and Full-Scale Methods for Examining Wind Effects on Buildings Gregory A. Kopp, 2018-06-12 Global economic losses due to severe weather events have grown dramatically over the past two decades A large proportion of these losses are due to severe wind storms such as tropical cyclones and tornadoes which can cause destruction to buildings houses and other infrastructure over large areas To address the growing losses many new large scale and full scale laboratories have been developed These tools are used to examine the issues that could not be solved

with the traditional tools of wind engineering including model scale boundary layer wind tunnels simplified standardized product tests and other methods of analysis This book presents state of the art results from the development of the many novel approaches being used to mitigate natural disasters around the world Steel-concrete Structures for Multistorey Buildings Juraj Kozák,1991 The construction of buildings shows a clear tendency towards an increased number of storeys and in accordance with the function of the structure to the utilization of more flexible layouts A typical feature of modern building is a high degree of prefabrication which contributes to the economic acceptability of such structures In this publication the author discusses buildings in which height dominates over other dimensions A comprehensive approach is adopted in examining the problems the design engineer is confronted with in order to achieve realistic and optimal design solutions Special attention is given to steel structures and their combination with reinforced concrete Throughout the book emphasis is placed on the fact that load carrying members are parts of the whole building The procedures observed discuss first of all the higher systems and then continue down to lower systems parts and elements The analysis is carried out from the viewpoint of the whole building with its components functions architecture and structures down to load carrying structures and static substructures in horizontal and vertical directions and their elements This work gives an added dimension to meeting the needs of designers of load carrying structures by also incorporating the viewpoints of its related disciplines University of Illinois Bulletin ,1962 *Graduate College* University of Illinois at Urbana-Champaign.
