The book provides an inspiring guide for all researchers and professionals in the field of design. Emotion Guideline Workbook Amic G. Ho, 2024-05-28. Manipulating the design process can be challenging for junior design art and creative students. Besides understanding the approaches to managing the design factors with logical thinking, they can lack experience in handling emotional changes and concerns and initiative factors during the design process. As a result, they struggle to practice design and need guidance for enhancing their decision making, evaluation, judgment, and motivation. This book proposes a set of guiding principles with the intention of assisting the reader in regulating the emotional changes that occur throughout the design process. This book offers practical approaches to those who would like to incorporate emotion in their design processes, which contrasts with previous scholarly research that has mostly focused on the theoretical level. It provides guidance to the reader through the process of adapting to the emotional changes that may occur throughout the design process during their design studies. It contains a literature review, research methods, and a discussion of the strengths and limitations. Featuring printable worksheets and additional tables to use as guidance, this highly practical text allows the reader to gain a full understanding of emotion in the design procedure through active involvement. The Emotion Guideline Workbook is perfect for design art and creative students as well as their instructors, researchers, and other learners who are interested in emotion-driven design. It will also appeal to students and academics in the fields of psychology and education.

Design Thinking Research Christoph Meinel, Larry Leifer, 2023-09-19. Extensive research conducted at the Hasso Plattner Design Thinking Research Program at Stanford University in Palo Alto, California, USA, and at the Hasso Plattner Institute in Potsdam, Germany, has yielded valuable insights on why and how design thinking works. The participating researchers have identified metrics, developed models, and conducted studies which are featured in this book and in the previous volumes of this series. This volume provides readers with tools to bridge the gap between research and practice in design thinking together with a range of real-world examples. Several different approaches to design thinking are presented while acquired frameworks are employed to understand team dynamics in design thinking. The contributing authors introduce readers to new approaches and fields of application and show how design thinking can tap the potential of digital technologies in a human-centered way. The book also presents new ideas on neuro design from Stanford University and the Hasso Plattner Institute in Potsdam, inviting readers to consider newly developed methods and how these insights can be applied to different domains. Design thinking can be learned. It has a methodology that can be observed across multiple settings. Accordingly, readers can adopt new frameworks to modify and update their current practices. The research outcomes gathered here are intended to inform and provide inspiration for all those seeking to drive innovation, be they experienced design thinkers or newcomers. It is the last in a series of 14 volumes published over the past 14 years reflecting the successes of the HPI Stanford Design Thinking Research Program. Many thanks to the Hasso Plattner Foundation for its valued support.
