Differential Equations And Their Applications An Introduction To Applied Mathematics Texts In Applied Mathematics V 11:

Differential Equations and Their Applications Martin Braun,1992-12-05 Used in undergraduate classrooms across the USA this is a clearly written rigorous introduction to differential equations and their applications Fully understandable to students who have had one year of calculus this book distinguishes itself from other differential equations texts through its engaging application of the subject matter to interesting scenarios This fourth edition incorporates earlier introductory material on bifurcation theory and adds a new chapter on Sturm Liouville boundary value problems Computer programs in C Pascal and Fortran are presented throughout the text to show readers how to apply differential equations towards quantitative problems

The Calculus of Complex Functions William Johnston,2022-04-01 The book introduces complex analysis as a natural extension of the calculus of real valued functions The mechanism for doing so is the extension theorem which states that any real analytic function extends to an analytic function defined in a region of the complex plane The connection to real functions and calculus is then natural The introduction to analytic functions feels intuitive and their fundamental properties are covered quickly As a result the book allows a surprisingly large coverage of the classical analysis topics of analytic and meromorphic functions harmonic functions contour integrals and series representations conformal maps and the Dirichlet problem It also introduces several more advanced notions including the Riemann hypothesis and operator theory in a manner accessible to undergraduates The last chapter describes bounded linear operators on Hilbert and Banach spaces including the spectral theory of compact operators in a way that also provides an excellent review of important topics in linear algebra and provides a pathway to undergraduate research topics in analysis The book allows flexible use in a single semester full year or capstone course in complex analysis Prerequisites can range from only multivariate calculus to a transition course or to linear algebra or real analysis There are over one thousand exercises of a variety of types and levels Every chapter contains an essay describing a part of the history of the subject and at least one connected collection of exercises that together comprise a project level exploration

Mathematical Systems Theory I Diederich Hinrichsen,Anthony J. Pritchard,2005-10-28 This book presents the mathematical foundations of systems theory in a self contained comprehensive detailed and mathematically rigorous way It is devoted to the analysis of dynamical systems and combines features of a detailed introductory textbook with that of a reference source The book contains many examples and figures illustrating the text which help to bring out the intuitive ideas behind the mathematical constructions

New developments in Functional and Fractional Differential Equations and in Lie Symmetry Ioannis P. Stavroulakis,Hossein Jafari,2021-09-03 Delay difference functional fractional and partial differential equations have many applications in science and engineering In this Special Issue 29 experts co authored 10 papers dealing with these subjects A summary of the main points of these papers follows Several oscillation conditions for a first order linear differential equation with non monotone

delay are established in Oscillation Criteria for First Order Differential Equations with Non Monotone Delays whereas a sharp oscillation criterion using the notion of slowly varying functions is established in A Sharp Oscillation Criterion for a Linear Differential Equation with Variable Delay The approximation of a linear autonomous differential equation with a small delay is considered in Approximation of a Linear Autonomous Differential Equation with Small Delay the model of infection diseases by Marchuk is studied in Around the Model of Infection Disease The Cauchy Matrix and Its Properties Exact solutions to fractional order Fokker Planck equations are presented in New Exact Solutions and Conservation Laws to the Fractional Order Fokker Planck Equations and a spectral collocation approach to solving a class of time fractional stochastic heat equations driven by Brownian motion is constructed in A Collocation Approach for Solving Time Fractional Stochastic Heat Equation Driven by an Additive Noise A finite difference approximation method for a space fractional convection diffusion model with variable coefficients is proposed in Finite Difference Approximation Method for a Space Fractional Convection Diffusion Equation with Variable Coefficients existence results for a nonlinear fractional difference equation with delay and impulses are established in On Nonlinear Fractional Difference Equation with Delay and Impulses A complete Noether symmetry analysis of a generalized coupled Lane Emden Klein Gordon Fock system with central symmetry is provided in Oscillation Criteria for First Order Differential Equations with Non Monotone Delays and new soliton solutions of a fractional Jaulent soliton Miodek system via symmetry analysis are presented in New Soliton Solutions of Fractional Jaulent Miodek System with Symmetry Analysis

Differential Equations and Their Applications M. Braun, 2012-12-06 This textbook is a unique blend of the theory of differential equations and their exciting application to real world problems First and foremost it is a rigorous study of ordinary differential equations and can be fully understood by anyone who has completed one year of calculus However in addition to the traditional applications it also contains many exciting real life problems These applications are completely self contained First the problem to be solved is outlined clearly and one or more differential equations are derived as a model for this problem These equations are then solved and the results are compared with real world data The following applications are covered in this text I In Section 1 3 we prove that the beautiful painting Disciples of Emmaus which was bought by the Rembrandt Society of Belgium for 170 000 was a modern forgery 2 In Section 1 5 we derive differential equations which govern the population growth of various species and compare the results predicted by our models with the known values of the populations 3 In Section 1 6 we derive differential equations which govern the rate at which farmers adopt new innovations Surprisingly these same differential equations govern the rate at which technological innovations are adopted in such diverse industries as coal iron and steel brewing and railroads
