A First Course in Complex Analysis Allan R. Willms, 2022-04-20 This book introduces complex analysis and is appropriate

for a first course in the subject at typically the third year University level It introduces the exponential function very early but does so rigorously It covers the usual topics of functions differentiation analyticity contour integration the theorems of Cauchy and their many consequences Taylor and Laurent series residue theory the computation of certain improper real integrals and a brief introduction to conformal mapping Throughout the text an emphasis is placed on geometric properties of complex numbers and visualization of complex mappings

The Calculus of Complex Functions William Johnston, 2022-04-01 The book introduces complex analysis as a natural extension of the calculus of real valued functions The mechanism for doing so is the extension theorem which states that any real analytic function extends to an analytic function defined in a region of the complex plane The connection to real functions and calculus is then natural The introduction to analytic functions feels intuitive and their fundamental properties are covered quickly As a result the book allows a surprisingly large coverage of the classical analysis topics of analytic and meromorphic functions harmonic functions contour integrals and series representations conformal maps and the Dirichlet problem It also introduces several more advanced notions including the Riemann hypothesis and operator theory in a manner accessible to undergraduates The last chapter describes bounded linear operators on Hilbert and Banach spaces including the spectral theory of compact operators in a way that also provides an excellent review of important topics in linear algebra and provides a pathway to undergraduate research topics in analysis The book allows flexible use in a single semester full year or capstone course in complex analysis Prerequisites can range from only multivariate calculus to a transition course or to linear algebra or real analysis There are over one thousand exercises of a variety of types and levels Every chapter contains an essay describing a part of the history of the subject and at least one connected collection of exercises that together comprise a project level exploration

Precalculus with Calculus Previews Dennis G. Zill, Jacqueline M. Dewar, 2013 Incorporating Zill's student friendly writing style and modern examples Precalculus with Calculus Previews Fifth Edition includes all of the outstanding features and learning tools found in the original text Essentials of Precalculus with Calculus Previews while incorporating additional coverage that some courses may require With a continued aim to keep the text complete yet concise the authors added four additional chapters making the text a clear choice for many mainstream courses This student friendly four color text offers numerous exercise sets and examples to aid in students learning and understanding and graphs and figures throughout serve to better illuminate key concepts The exercise sets include engaging problems that focus on algebra graphing and function theory the sub text of so many calculus problems The authors are careful to use the terminology of calculus in an informal and comprehensible way to facilitate the student's successful transition into future calculus courses Includes a new chapter Provides a no nonsense approach to precalculus with an informal intuitive and straightforward writing style Incorporates the terminology used in calculus in an informal way to acclimate students to these new terms Includes over 1600 figures to help illuminate key concepts Notes from the Classroom sections address a variety of student textbook classroom calculus issues

such as alternative terminology reinforcement of important concepts tips on memorization misinterpretations common errors solution procedures calculators and advice on the importance of neatness and organization Calculus Previews conclude each chapter and highlight a single calculus concept with a focus on the algebraic logarithmic and trigonometric manipulations necessary for successfully completing the problem Translating Words into Functions illustrates how to translate a verbal description into a symbolic representation of a function
