Chandra Shekhar Rao, Sunkari Venkatramulu & Dr. P. Sammulal,2021-05-05 The influence and impact of digital images on modern society science technology and art are tremendous Image processing has become such a critical component in contemporary science and technology that many

tasks would not be attempted without it. It is a truly interdisciplinary subject that draws from synergistic developments involving many disciplines and is used in medical imaging, microscopy, astronomy, computer vision, geology, and many other fields. With a few exceptions, the topics of optical information processing and digital information processing are usually covered in different books written by experts in one or the other. It is rare that the two topics are both covered in the same volume. This book is an exception to this trend and is notable in several different aspects but especially in its breadth of coverage of both topics. It seems very appropriate to have both general topics covered in the same book for optical processing systems designed broadly commonly include digital systems to drive the optical system and to post process the data, example adaptive optic systems while digital processing systems most commonly operate on data that has been gathered by an optical system. As a consequence sophisticated image gathering and handling systems today include both types of technology a merger that grows more complete as time progresses. Indeed even consumer oriented devices such as digital cameras are sophisticated systems with optical and digital parts. This is a text for use in a first practical course in image processing and analysis for final year undergraduate or first year graduate students with a background in biomedical engineering, computer science, radiologic sciences or physics. Designed for readers who will become end users of digital image processing in the biomedical sciences it emphasizes the conceptual framework and the effective use of image processing tools and uses mathematics as a tool minimizing the advanced mathematical development of other textbooks.

Digital Image and Signal Processing for Measurement Systems J. Richard Duro, Lopez Fernando Pena, 2022-09-01 This book provides an overview of advanced digital image and signal processing techniques that are currently being applied in the realm of measurement systems The book is a selection of extended versions of the best papers presented at the Sixth IEEE International Workshop on Intelligent Data Acquisition and Advanced Computing Systems Technology and Applications IDAACS 2011 related to this topic and encompass applications that go from multidimensional imaging to evoked potential detection in brain computer interfaces The objective was to provide a broad spectrum of measurement applications so that the different techniques and approaches could be presented Digital Image and Signal Processing for Measurement Systems concentrates on signal processing for measurement systems and its objective is to provide a general overview of the area and an appropriate introduction to the topics considered This is achieved through 10 chapters devoted to current topics of research addressed by different research groups within this area These 10 chapters reflect advances corresponding to signals of different dimensionality They go from mostly one dimensional signals in what would be the most traditional area of signal processing

realm to RGB signals and to signals of very high dimensionality such as hyperspectral signals that can go up to dimensionalities of more than one thousand The chapters have been thought out to provide an easy to follow introduction to the topics that are addressed including the most relevant references so that anyone interested in this field can get started in the area They provide an overview of some of the problems in the area of signal and image processing for measurement systems and the approaches and techniques that relevant research groups within this area are employing to try to solve them which in many instances are the state of the art of some of these topics
