Cox, 2016-04-01 A strategic requirement is something an organisation sets out to achieve it could be the long term vision the organisation sets itself the key business condition for a specific project to be a success or a business strategy to achieve a goal A set of strategic requirements defines the goals strategies and tactics that organisations need to put in place to give them direction and impetus Business analysts and consultants have to understand strategic requirements to know where projects can deliver business benefits and where not The ability of the analyst to interview gather analyse model and present strategic requirements is key to success The primary tool consultants and business analysts use for communication is talking but if you cannot present all that incredible information back to your client effectively it is hard for them and you to get to grips quickly enough with what is going on Being able to present a model is really powerful because it provides a visual format and structure on one page to reason about those strategic requirements Dr Karl A Cox offers a process guidelines and ideas that have been tried and tested in practice for conducting interviews and shows you how to rapidly turn interview findings into strategic requirements models all on one page to present to your clients customers team and or supervisors Software and Systems Traceability Jane Huang, Orlena Gotel, Andrea Zisman, 2012-02-02 *Software and Systems Traceability* provides a comprehensive description of the practices and theories of software traceability across all phases of the software development lifecycle The term software traceability is derived from the concept of requirements traceability Requirements

traceability is the ability to track a requirement all the way from its origins to the downstream work products that implement that requirement in a software system Software traceability is defined as the ability to relate the various types of software artefacts created during the development of software systems Traceability relations can improve the quality of a product being developed and reduce the time and cost of development More specifically traceability relations can support evolution of software systems reuse of parts of a system by comparing components of new and existing systems validation that a system meets its requirements understanding of the rationale for certain design and implementation decisions and analysis of the implications of changes in the system
